

**National Interagency Coordination Center
Incident Management Situation Report
Friday, June 1, 2018 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial Attack Activity:	Light (62) new fires
New large incidents:	1
Large fires contained:	1
Uncontained large fires:**	5
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	2

Nationally, there are 3 large fires being managed under a strategy other than full suppression.

**Uncontained large fires include only fires being managed under a full suppression strategy.

Southwest Area (PL 3)

New fires:	3
New large incidents:	0
Uncontained large fires:	1
Type 2 IMTs committed:	1

Buzzard, Gila NF. IMT 2 (Millert). Ten miles east of Reserve, NM. Timber. Active fire behavior with single-tree torching, flanking and backing. Residences threatened. Road, area and trail closures in effect.

Kellar, Lincoln NF. Previously reported incident. Three miles east of Queen, NM. Timber and grass. Active fire behavior with wind-driven runs, creeping and torching. Numerous structures threatened. Area closures in effect. Last report unless significant activity occurs.

Predictive Services Discussion: Critical fire weather conditions are expected across portions of the Southwest as the upper level trough weakens and begins to move inland. Breezy southwesterly winds along with the typically low afternoon humidity levels will create an active burn environment across the Four Corners Region. Further north, scattered showers and storms will be possible across the central and northern Great Basin and the Northern Rockies as a cold front moves across the region. As has been the case thus far, storms should be wet. Ahead of the trough within a ridge positioned over the Great Plains, another dry line with thunderstorms will develop across West Texas. Hot and humid conditions are expected across the eastern Great Plains as high pressure extends from central Mexico up to Hudson Bay in Canada. In the East, another passing front will move across the Ohio River Valley bringing additional showers and storms. In Alaska, isolated storms will be possible across the Interior along the Alaska Range as a low pressure area in the Gulf pumps in a little moisture from the Yukon Territory. Most of the rest of the state can expect continued warm and dry conditions.

Extreme Fire Behavior 1

Weather / Fire Behavior Category

Mild, moderate and EXTREME fire behavior has always been present in cases of shelter deployment. It is critical for firefighters to maintain situational awareness of live and dead fuel moisture conditions as well as predicted and current weather conditions. As fire behavior changes, it is critical to act decisively in regards to the changing situation.

Discuss the following indicators of extreme fire behavior:

- Relative humidity less than 15%
- 1-hour fuel moisture less than 5%
- Transition from surface to crown fire
- Smoldering fires that exist in the early part of the day are beginning to burn very actively as the day progresses
- Approaching thunderheads with dark clouds beneath
- Presence of dust devils indicating an unstable atmosphere
- Increased spotting
- Sudden calm
- High clouds moving fast in direction different from surface wind
- Predicted Haines Index of 5 and 6 in those areas where this level is a good indicator of atmospheric instability
- Fire whirls
