

**National Interagency Coordination Center
Incident Management Situation Report
Saturday, June 2, 2018 – 0530 MT
National Preparedness Level 2**

National Fire Activity

| | |
|-------------------------------|----------------------|
| Initial Attack Activity: | Light (75) new fires |
| New large incidents: | 4 |
| Large fires contained: | 2 |
| Uncontained large fires:** | 7 |
| Area Command teams committed: | 0 |
| NIMOs committed: | 0 |
| Type 1 IMTs committed: | 1 |
| Type 2 IMTs committed: | 2 |

Nationally, there are 2 large fires being managed under a strategy other than full suppression.

**Uncontained large fires include only fires being managed under a full suppression strategy.

| New fires: | 10 |
| New large incidents: | 3 |
| Uncontained large fires: | 3 |
| Type 1 IMTs committed: | 1 |
| Type 2 IMTs committed: | 1 |

* **Ute Park**, Cimarron District, New Mexico State Forestry. IMT 1 (Day). One mile east of Ute Park, NM. Timber and chaparral. Extreme fire behavior with crowning, wind-driven runs and long-range spotting. Numerous structures threatened. Evacuations, road, area and trail closures in effect.

Buzzard, Gila NF. IMT 2 (Millert). Ten miles east of Reserve, NM. Timber. Active fire behavior with torching, running and flanking. Residences threatened. Road, area and trail closures in effect.

* **Lyons**, Las Vegas District, New Mexico State Forestry. Thirty miles east of Santa Rosa, NM. Timber and short grass. Active fire behavior with running and torching.

Kellar, Lincoln NF. Three miles east of Queen, NM. Timber and grass. Moderate fire behavior with single-tree torching, backing and creeping. Numerous structures threatened. Area closures in effect. Last report unless significant activity occurs.

Predictive Services Discussion: Pockets of critical fire weather conditions will be possible across the Four Corners Region as a weakening trough approaches from the west to create breezy conditions along with the typically low humidities. In addition to this concern will be the concern for convective activity in the afternoon, especially along the New Mexico state line with Arizona. Elsewhere, weak high pressure ridging over the remainder of the West and Great Plains will promote overall very warm and dry conditions. A weakening cold front moving east across the northern and central Great Plains will bring scattered strong storms to the middle and upper Mississippi River Valley. Along the East Coast, a stalled out area of low pressure will continue to bring moderate to heavy rainfall to the Mid-Atlantic states and North Carolina. In Alaska, isolated storms will be possible across the southern Interior along the Alaska Range as a low pressure area in the eastern Gulf continues to pump in a little moisture from the Yukon Territory. Most of the rest of the state can expect continued warm and dry conditions though a few showers and storms will be possible up near ANWR in the afternoon as another low pressure area begins dropping south from the Arctic Ocean.

Extreme Fire Behavior 2

Weather - Fire Behavior Category

Mild, moderate and EXTREME fire behavior has always been present in cases of shelter deployment. It is critical for firefighters to maintain situational awareness of live and dead fuel moisture conditions as well as predicted and current weather conditions. As fire behavior changes, it is critical to respond correctly to the changing situation.

- Discuss how the following factors can contribute or lead to extreme fire behavior:
 - Frost Kill: Has there been a late or unusually extensive freeze? Is the loading of frost-killed fuels high?
 - Drought Conditions: Live Fuel Moistures Index, KBDI, Soil Moisture Index, low humidity, high temperatures
 - Slope: Increases fire spread uphill, preheats fuels by convection, may channel winds
 - Sea Breeze/Foehn: Wind direction may vary throughout the day, humidity changes may occur; strong wind velocities may drive fire behavior to extremes
- To aid situational awareness, track NFDRS live and dead fuel moisture outputs.
- Take hourly weather observations and track the hourly changes. By tracking fuel moisture and weather observations and using the Fire Severity Related to Fuel Moisture Chart, firefighters can be alerted to those conditions that can lead to situations where there is a high potential for extreme fire behavior.
