

National Interagency Coordination Center
Incident Management Situation Report
Monday, June 4, 2018 – 0530 MT
National Preparedness Level 2

National Fire Activity

Initial Attack Activity:	Light (105) new fires
New large incidents:	2
Large fires contained:	3
Uncontained large fires:**	7
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	1
Type 2 IMTs committed:	2

Nationally, there are 2 large fires being managed under a strategy other than full suppression.

**Uncontained large fires include only fires being managed under a full suppression strategy.

Predictive Services Discussion: Scattered wet storms will be possible along the Canadian Border as a weak cold front passes across the Northern Rockies in the afternoon. Across the Southwest, hot and dry conditions will continue as the ridge over the Great Plains slowly migrates westward. While cooler conditions are expected across California, the airmass will be very dry. However, winds should be light. Across the Great Plains a weak system will bring the potential for strong storms to the central Plains states. In the East, a strong low pressure area will bring cooler conditions to the Ohio and Susquehanna River basins. In Alaska, widely scattered showers and storms will be possible along the Alaska and Brooks Ranges as a pair of low pressure areas along the western coast pump limited amounts of moisture inland. However, weak high pressure ridging between the two systems will keep a majority of the Interior warm and dry.

Aviation Watch Outs

Aviation Category

As part of risk management, especially during high activity fires, each aviation manager and employee should be asking questions.

- Is the flight necessary?
- Who is in charge?
- Are hazards identified and known?

Flight Hazards: Have they been identified and assessed? Have the pilots been informed?

- Should the operation or the flight be stopped due to a change in conditions? Consider the following:
 - Radio Communications
 - Environmental Conditions – weather, visibility, terrain, elevation, temperatures
 - Mission Priorities
 - Successful Mission Completion Probabilities
- Is there a better way to do it?
- Is there pressure to complete a mission at all costs?
- Can you justify your actions?
- Is the mission airspace confined or congested?

Multiple aircraft

Mixed types of aircraft

Poor visibility

- Do you have an escape route?
- Are any guidelines being ignored or policies being broken?
- Are communications getting tense?
- Are you deviating from the assigned operation or flight?
