

National Interagency Coordination Center
Incident Management Situation Report
Thursday, June 21, 2018 – 0530 MT
National Preparedness Level 2

National Fire Activity

Initial Attack Activity:	Light (110) new fires
New large incidents:	2
Large fires contained:	2
Uncontained large fires:**	9
NIMOs committed:	1
Type 1 IMTs committed:	1
Type 2 IMTs committed:	2

Nationally, there are 29 large fires being managed under a strategy other than full suppression.

**Uncontained large fires include only fires being managed under a full suppression strategy.

Rocky Mountain Area (PL 2)

New fires:	1
New large incidents:	0
Uncontained large fires:	3
NIMOs committed:	1
Type 1 IMTs committed:	1
Type 2 IMTs committed:	1

416, San Juan NF. Transfer of command from IMT 1 (Pechota) to NIMO (Reinarz) will occur tomorrow. Thirteen miles north of Durango, CO. Timber and brush. Minimal fire behavior. Numerous residences threatened. Road, area and trail closures in effect.

Burro, San Juan NF. Transfer of command from IMT 1 (Pechota) back to the local unit will occur today. Fourteen miles south of Rico, CO. Timber. Minimal fire behavior. Road, area and trail closures in effect.

Badger Creek, Medicine Bow-Routt NF. Transfer of command from IMT 2 (Greer) back to the local unit will occur today. Two miles northwest of Mountain Home, WY. Timber. Minimal fire behavior. Numerous residences and sage-grouse habitat threatened. Road, area and trail closures in effect.

Southwest Area (PL 3)

New fires:	10
New large incidents:	0
Uncontained large fires:	3

Buzzard, Gila NF. Ten miles east of Reserve, NM. Timber. Active fire behavior with backing and flanking. Structures threatened.

San Antonio, Valles Caldera National Preserve, NPS. Eighteen miles northwest of Los Alamos, NM. Timber and short grass. Moderate fire behavior with creeping and smoldering. Structures threatened. Road, area and trail closures in effect.

Cottonwood, Cimarron District, New Mexico State Forestry. Twelve miles north of Cimarron, NM. Timber, brush and short grass. Minimal fire behavior.

Predictive Services Discussion: Scattered wet, strong storms are expected across the Pacific Northwest and the Northern Rockies as a weak cold front moves on shore and inland. To the south, the strong ridge of high pressure will continue to create hot and dry conditions. Pockets of critical fire weather conditions are possible across the northern Great Basin, northern California, and southeastern Oregon as breezy winds encounter the hot, dry air. In the East, strong thunderstorms are expected across the Mid-West and the Mississippi River as a low pressure area over the region intensifies and draws in moisture from the Gulf of Mexico. In Alaska, high pressure across the Interior and low pressure along the West Coast will allow for an increasingly unstable southeasterly flow to remain in place across the state. Scattered thunderstorms are expected across the eastern Interior.

Wildland/Urban Interface Watchouts

Operational Engagement Category

The primary consideration is to first assure firefighter and public safety. It is a must to assess potential fire behavior, ingress/egress routes, nature of the threat, hazardous materials, and available water supplies before engaging in the protection of any structures. The first step in conducting a safe operation is to assess whether the firefighting operations can be conducted safely.

Consider the "Wildland/Urban Interface Watchouts" in completing a risk analysis for the urban interface area to be protected. Remember there are three categories of structures:

- Those that are not threatened.
- Those that are threatened.
- Those that have already been lost or too dangerous to protect.

Wildland/Urban Interface Watchouts:

- Poor access and narrow, one-way roads. A rapidly spreading fire could trap apparatus and personnel before they can turn around or move away from the flames and smoke.
- Observe bridge limits. Exceeding bridge limits could lead to bridge failure with a resultant blocking of ingress/egress routes that could result in the loss of an escape route or loss of equipment.
- Inadequate water supply. Without a reserve supply of water, the fire can overtake an area before the fuels can be cleared away.
- Natural fuels are located 30 feet or closer to structures on level ground. Remember structures on slopes require greater clearance. Structures are located on canyon slopes or "chimneys" on slopes of 30% or more with continuous, flashy fuels. The resulting rate of spread of any fire in this terrain can quickly extend beyond control.

Extreme fire behavior: Situations involving crowning, large flame heights and erratic fire behavior can extend in an unpredictable manner beyond the control of any number of personnel. Strong winds of 25+ MPH: Winds increase the chance of spotting over the heads of firefighters and trapping them between both fire areas. Winds also cause greater preheating of fuels in the path of a fire front.

- The need to evacuate the public, livestock, pets, and/or animals. This critical activity can pull personnel from the firefighting activity and can distract attention from fire behavior at a time when the greatest alertness is needed.
- Propane and above ground fuel tanks that are next to wooden structures or close to vegetation.
- Power lines and poles: What is their location in relation to the structures that are being protected? Watch for both overhead and downed power lines.
- Local citizens are attempting suppression activities. Lack of knowledge in fire suppression may lead to unsafe tactics.
- Airtanker retardant drops and helicopter bucket operations: Establish communications and keep fire personnel out of the drop zone.
