

National Interagency Coordination Center
Incident Management Situation Report
Wednesday, May 9, 2018 – 0800 MT
National Preparedness Level 2

National Fire Activity

Initial attack activity:	Light (156) new fires
New large incidents:	3
Large fires contained:	3
Uncontained large fires:**	7
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	1
Type 2 IMTs committed:	1

Nationally, there are 4 large fires being managed under a strategy other than full suppression.

**Uncontained large fires include only fires being managed under a full suppression strategy.

*** Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

***Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

Predictive Services Discussion: The ridge of high pressure will move east to the Continental Divide by afternoon and will allow for a weak cold front to move from the Pacific Northwest into the Northern Rockies and the Northern Great Basin by afternoon. Scattered wet storms will develop ahead of the cold front. While temperatures remain well above normal inland, temperatures along the West Coast will cool slightly along the Pacific Coast. Very warm and dry conditions are expected to continue across the Southwest while temperatures will be near normal in the east as a weak cold front moves east from the Mississippi River. Florida and the Carolinas will remain dry. In Alaska, high pressure will strengthen over the state's interior and will push temperatures to be well above average. Southwestern Alaska will experience widespread showers as a low pressure over the Aleutians pumps moisture into that portion of the state from the Bering Sea.

Base All Actions On Current And Expected Fire Behavior

Weather - Fire Behavior Category

- Can the resources you are replacing give you a thorough briefing? What information will you want to get from resources you are replacing?
- Can you observe the area or use scouts? What information are the scouts looking for?
- Have escape routes and safety zones been thoroughly scouted? List some ways your crew will scout out an area before you begin working
- Are escape routes and safety zones marked for night use? How do you adjust marking safety zones and escape routes for night use?
- Have potential dangers been located and can they be dealt with? List some dangerous fire behavior you may encounter and how you would deal with it.
- Do you have access to weather and fire behavior forecasts? What is your unit's procedure for obtaining forecasts?
- To reduce risk, initiate the following:
 - Post lookouts.
 - Check communications.
 - Retreat if you have doubts about your escape routes or safety zones or if the situation becomes too complex. Discuss fires where you have adjusted your actions based on current and expected fire behavior.

How would you judge the fire season? (Above normal, below, or average.)

Have an idea? Have feedback? Share it.
