

**National Interagency Coordination Center  
Incident Management Situation Report  
Saturday, May 19, 2018 – 0800 MT  
National Preparedness Level 2**

**National Fire Activity**

Initial attack activity:	Light (78) new fires
New large incidents:	1
Large fires contained:	3
Uncontained large fires:**	5
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	1
Type 2 IMTs committed:	1

Nationally, there are 6 large fires being managed under a strategy other than full suppression.

\*\*Uncontained large fires include only fires being managed under a full suppression strategy.

**Southern Area (PL 3)**

New fires:	14
New large incidents:	0
Uncontained large fires:	2
Type 1 IMTs committed:	1
Type 2 IMTs committed:	1

**Mallard**, Texas A&M Forest Service. Transfer of command from IMT 1 (Dueitt) back to the local unit will occur today. Started on private land 13 miles east of Wayside, TX. Brush and short grass. Minimal fire behavior.

**Avian Complex**, (three fires), Big Cypress National Preserve, NPS. Transfer of command from IMT 2 (Parrish) back to the local unit will occur tomorrow. Fifteen miles northeast of Everglades City, FL. Southern rough and tall grass. Minimal fire behavior. Residences threatened. Area and trail closures in effect. Precipitation occurred over the fire area yesterday.

**Caldwell**, Texas A&M Forest Service. Started on private land 20 miles northwest of Fort Davis, TX. Brush and tall grass. Minimal fire behavior.

### **Southwest Area (PL 3)**

New fires: 8  
 New large incidents: 1  
 Uncontained large fires: 3

**Happy**, Northwest District, Arizona DOF. Nineteen miles north of Bagdad, AZ. Brush and short grass. Moderate fire behavior with backing.

**Rattlesnake**, Fort Apache Agency, BIA. Previously reported incident. Twenty-four miles southwest of Alpine, AZ. Timber, heavy logging slash, and short grass. Minimal fire behavior. Road, area and trail closures in effect.

**Pinery**, Southeast District, Arizona DOF. Six miles southwest of Hilltop, AZ. Timber and brush. Minimal fire behavior. Road, area and trail closures in effect.

\*1 Hectare = 2.47 Acres

\*\*\* **Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.**

\*\*\*Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

**Predictive Services Discussion:** A trough of low pressure will linger over the northwestern states and the Great Basin. This will allow for the continuance of the overall convective pattern in these areas. Critical fire weather conditions across the Southwest will subside in most areas except along the Texas and New Mexico state lines where winds will continue to be breezy. In the East, the tropical low pressure area along the northern Gulf Coast will move into the Tennessee River Valley and will continue to keep the Atlantic Coastal states wet. In Alaska, low pressure areas over the Bering Sea and the Aleutian Islands will continue to create scattered showers across the western Interior while areas along the Canadian Border remain warm and dry under the influence of a high pressure ridge to the east over the western Northwest Territories.

<http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

## **ATV – Safety**

*Vehicles/Roads Category*

The use of ATVs for wildland fire suppression and prescribed fire operations has increased dramatically over the last ten years. Note: Several agencies have required training for ATV operations (check your agency's requirements).

### **Most injuries associated with ATVs occur when:**

- ◆ the driver loses control (When the operator encounters a change of terrain or swerves to avoid an obstacle, it causes an abrupt change of balance and loss of control)
- ◆ the vehicle rolls over
- ◆ the driver or passenger is thrown off
- ◆ the operator's loss of attention to what, where, and how an ATV is being operated
- ◆ there is a collision with a fixed object

### **Identified contributing factors to ATV accidents include:**

- ◆ rider inexperience
- ◆ excessive speed combined with rough terrain, can create enough pitch and bounce to cause the operator to lose control of the vehicle
- ◆ lack of helmet use
- ◆ the ATV is improperly loaded or load weight exceeds vehicle operation capacity
- ◆ the operator carries a passenger that affects the operators control and operation of the ATV

### **Safety measures for ATV use include:**

- ◆ Conduct pre-ride inspection which should include checking tires, throttle cable, front and rear brakes, lights and switches, oil and fuel, chain or drive shaft, air filter, clean out of weeds and other debris from around engine and other hot components, and the chassis for any defects or wear.
- ◆ Single riders only – Injuries frequently occur to passengers, therefore riding double should not be permitted.
- ◆ Always wear PPE – helmets, eye protection, and protective clothing. Appropriate helmets are those designed for motorcycle (not firefighting) use, and should include safety visors/face shields, goggles, or safety glasses for eye protection.
- ◆ Use headlights to improve visibility by other vehicles.
- ◆ Maintain speeds acceptable for riding conditions, especially over uneven terrain.
- ◆ Traversing slopes should be avoided.
- ◆ Mounted or towed loads should not exceed manufacturer's recommendation and should be properly mounted so that weight transfer does not affect the center of gravity of the machine – mounting a tank (e.g., drip torch) on the rear of the vehicle increases the chances for a rear turnover.
- ◆ Do not drive on public roads – collisions with automobiles on public roads are the most common cause of fatal ATV accidents. It may be illegal to operate an ATV on public roads – check your state's laws.
