

**National Interagency Coordination Center  
Incident Management Situation Report  
Friday, November 23, 2018 – 0800 MT  
National Preparedness Level 1**

**National Fire Activity**

Initial Attack Activity:	Light (38) new fires
New large incidents:	0
Large fires contained:	1
Uncontained large fires:**	1
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	1
Type 2 IMTs committed:	1

\*\*Uncontained large fires include only fires being managed under a full suppression strategy.

[Link](#) to Geographic Area daily reports.

This will be the last daily Incident Management Situation Report. This report will post every Friday at 0800 Mountain Time unless significant activity occurs.

In support of Super Typhoon Yutu, IMT 2 (Dalrymple) has mobilized to Saipan, Northern Mariana Islands.

\*\*\*Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

**Predictive Service Discussion:** Moderate to heavy rainfall will continue across northern California through much of the day, especially before noon. Snow levels will be generally at or above 6000 feet. The next concern will be for a dry off shore flow that develops across Southern California Sunday and Monday, but this will be short-lived. The wet pattern across the Pacific Northwest will resume Monday afternoon as another wet front approaches from the West. The wet pattern will sag southward as far south as northern California by mid-week. There is some concern that a Pineapple Express could set up briefly over northern California Wednesday and Thursday which would lead to heavy rainfall in the complex terrain and over recent burn areas. In the East, cooler than average conditions are expected as an upper level trough dips south from Canada over the weekend and produces a cooling trend. Near average conditions are expected along the Gulf Coast through the period as a light westerly flow dominates.

## Refusing Risk

*Operational Engagement Category*

Every firefighter has the right and obligation to report safety problems and contribute ideas regarding their safety. Supervisors are expected to give these concerns and ideas serious consideration. When an individual feels an assignment is unsafe, they also have the obligation to identify, to the degree possible, safe alternatives for completing that assignment. Turning down an assignment is one possible outcome of managing risk.

- A turn down is a situation where an individual has determined an assignment cannot be undertaken as given, and they are unable to negotiate an alternative solution.
- A turn down must be based on an assessment of risks and the ability of an individual or organization to control those risks.
- A situation may be a candidate for a turndown if:
  - There is a violation of safe work practices.
  - Environmental conditions make the work unsafe.
  - The forces lack the necessary qualifications or experience.
  - Defective equipment is being used.
- The following steps will be used when turning down an assignment:
  - The individual will directly inform their supervisor that they are turning down the assignment as given. (Document using criteria outlined in the risk management process.)
  - Supervisor will notify the Safety Officer immediately upon being informed. In the absence of a Safety Officer, the appropriate Section Chief or Incident Commander will be notified. This step provides accountability for decisions and initiates communication of safety concerns.
  - If the supervisor requests another resource to perform the assignment, he/she is responsible for informing that resource that the assignment has previously been refused and the reason(s) why.
  - The safety hazard should be documented by the submission of a SAFENET or SAFECOM.
- These actions do not stop an operation from being carried out. This protocol is integral to the effective management of risk as it provides timely identification of hazards to the chain of command, raises risk awareness for both leaders and subordinates, and promotes accountability.
