

National Interagency Coordination Center
Incident Management Situation Report
Friday, October 12, 2018 – 0800 MT
National Preparedness Level 1

National Fire Activity

Initial Attack Activity:	Light (203) new fires
New large incidents:	2
Large fires contained:	4
Uncontained large fires:**	6
Area Command teams committed:	0
NIMOs committed:	1
Type 1 IMTs committed:	0
Type 2 IMTs committed:	2

Nationally, there are 43 large fires being managed under a strategy other than full suppression.

**Uncontained large fires include only fires being managed under a full suppression strategy.

[Link](#) to Geographic Area daily reports.

In support of Hurricane Florence, NIMO (Houseman) is mobilizing to New Bern, NC.

***Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

Predictive Service Discussion: High pressure will remain off the West Coast as a broad trough lingers over most of the U.S. The remnants of Hurricane Michael will move across the Mid-Atlantic and offshore by late Friday. It will continue to produce heavy rain from the Carolinas to New England before moving well into open waters Saturday. In the West, an upper cutoff low and the remnants of Tropical Storm Sergio will drift across the Southwest, bringing showers and thunderstorms to the region through the weekend. A deeper, colder trough will drop across the northern Rockies and Plains bringing snow by Saturday to Montana, Wyoming and Colorado. This will also bring northerly to northeasterly flow to California, setting up offshore wind conditions that could increase the risk of wildfires through the weekend. A cold front will push across the central and eastern U.S. during the week, bringing rain and thunderstorms to the Plains and Mississippi Valley through midweek and to the eastern states by the end of the week. Temperatures will plunge during the weekend across the center of the country before returning to seasonal conditions during the week while the rest of the country remains mild to warm through the period.

Firefighter Nutrition

Firefighter Health & First Aid

Nutrition is a critical part of the health and safety of wildland fire suppression personnel. This is the fuel for the body to perform the work and maintain cognitive abilities. Wildland firefighters on the fireline need 4,000-6,000 calories a day to not go into an energy deficit. Consider the following key points when choosing your meal:

- There are 3 major energy sources in food: carbohydrates, protein, and fats.
- Carbohydrates (also called sugar) offer an immediate source of energy for your body. They provide the fuel for your muscles and organs, such as your brain.
- Proteins are the basic building blocks of the human body. They are made up of amino acids that help build muscles, blood, skin, hair, nails and internal organs.
- Fat is an essential nutrient that provides energy, energy storage, insulation, and contour to the body.
- MTDC recommends eating 150-200 kcals every 2 hours during the work shift to maintain blood glucose and energy levels.

Carbohydrates:

- Studies on athletes have shown that carbohydrates are the most critical energy source for performance and health.
- Carbohydrates are your body's first choice for fuel. If given a choice of several types of foods simultaneously, your body will use the energy from carbohydrates first.
- If you do not eat enough carbohydrates, the following can occur:
 - Fatigue
 - Muscle cramps
 - Poor mental function
- The fire camp lunches (called shift food) are designed to allow firefighters small amounts of food (primarily carbohydrates) that can be easily eaten throughout the work shift.

Discussion Points:

How are you eating your fire lunch? Is it all at once or small amounts throughout the day? Think of long duration events (Ultra Runs, triathlons), do you see athletes stopping for a big meal or eating small amounts constantly throughout the race?
