Predictive Services Discussion: As the upper level trough over southwestern Canada moves east toward Saskatchewan and Manitoba, the hot ridge of high pressure over the Southwest will slightly amplify northward. This will push temperatures 10 degrees or so above average. Breezy winds across the northern tier of the country could allow for pockets of critical fire weather conditions to develop in critically dry areas like the northern Great Basin and Oregon. To the east, Texas will begin to dry out, as a departing cold front to the northeast pulls the moisture into the Tennessee River Valley. The Mid-Atlantic States and New England will be wet with moderate rainfall, as the leading edge of the front moves east from the Great Lakes Region.

Attempting A Frontal Assault On A Fire

Operational Engagement Category

Attempting a frontal assault on a fire is recognized as Watchout Situation #10 and is a potentially dangerous tactic.

If your tactics include a frontal assault, the following checklist must be adequately addressed before engaging the fire:

- Has the fire been scouted and sized up? Who will scout and size up a fire and what are they looking for?
- Is your position defensible? List what makes a firefighter's position defensible. (Anchor points, safety zones, escape routes, etc.)
- Are escape routes and safety zones adequate? Review what constitutes an adequate safety zone and escape route.
- Do you have an anchor point? How would you establish an anchor point for a frontal assault on a fire?
- Do you have adequate resources to complete the assault? Discuss things you need to consider; for example, if the frontal assault fails, do you have backup?
- Are you informed on strategy, tactics, and hazards? Consider what could happen if someone has a different approach than you; i.e., the IC has a burnout operation planned while you are attempting frontal assault.
- Is the terrain favorable to holding the fire? Discuss ways the terrain will influence where you will make a stand.
- Are you relying on aircraft for support operation? Any operation, especially frontal assault, should not need air resources to be safe.

In order to reduce the risks, reassess your tactics, post lookouts, identify situations in which firefighters may be enticed to attempt frontal assault on a fire. Review why this may or may not be a good idea.
