

National Interagency Coordination Center
Incident Management Situation Report
Friday, April 19, 2019 – 0800 MT
National Preparedness Level 1

National Fire Activity (April 12 – April 18)

Initial attack activity:	Light (341) new fires
New large incidents:	5
Large fires contained:	12
Uncontained large fires:**	10
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally, there is 1 large fire being managed under a strategy other than full suppression.

**Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 1)

New fires:	41
New large incidents:	4
Uncontained large fires:	8

* **Sizemore**, Daniel Boone NF. Five miles northeast of Manchester, KY. Hardwood litter. Minimal fire behavior with creeping.

Crow Hollow, Northeast Area, Oklahoma DOF. Ten miles east of Tahlequah, OK. Timber. Minimal fire behavior.

Bville Casino, Osage Agency, BIA. Four miles southwest of Bartlesville, OK. Tall grass and hardwood litter. No new information.

CR 2297 Allentown (03), Florida Forest Service. Eight miles southeast of Callaway, FL. Timber and southern rough. No new information. Last report unless new information is received.

Radar, Oklahoma DOF. One mile west of Bartlesville, OK. Timber. No new information.

Czar Coal, Kentucky DOF. Ten miles south of Inez, KY. Timber and tall grass. No new information. Last report unless new information is received.

Cooper, Oklahoma DOF. Four miles east of Fort Supply, OK. Brush and tall grass. No new information. Last report unless new information is received.

Turkey, East Central Area, Oklahoma DOF. Nine miles southeast of Blanco, OK. Timber. No new information.

*** Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

***Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

Predictive Services Discussion: A passing weak cold front will bring a slight cool down to the warming temperatures across the West on Friday and more showers to the Northern Rockies. The high pressure ridge will weaken as it moves off into the Great Plains. Another low pressure system will drop south across northern California and the Great Basin on Saturday and Sunday. Pockets of critical fire weather conditions will be possible along the Mexican Border as the passing system creates breezy conditions with low humidities. High pressure with warming temperatures will return to the West Monday and Tuesday as the low pressure system weakens and moves into the Plains. Another weak cold front will move into the Pacific Northwest and Northern Rockies on Wednesday and Thursday and will flatten the ridge. This will produce shower activity along the front (with lightning), and breezy conditions across the Great Basin. In Alaska, low pressure over the Interior will create scattered showers as it slowly drifts west toward the Bering Strait by Sunday. As this occurs, a drying trend will ensue as high pressure builds in from the Yukon Territory.

Smoke Exposure

Firefighter Health & First Aid

Exposure to smoke during fire operations can be a significant safety concern. Research has shown that smoke exposure on prescribed fires, especially in the holding and ignition positions, often exceeds that on wildfires. There are many precautions that can be taken to reduce personnel from exposure to smoke.

- Planning: Smoke exposure needs to be considered when planning suppression tactics and prescribed fires. Simple actions can mitigate smoke exposures, such as:
 - Altering line locations can have a significant impact on smoke exposure.
 - Placing firelines in areas of lighter fuels or moving lines to roads or other barriers that will require less holding, patrol and mop-up will significantly reduce the smoke exposure to personnel.
 - Use flanking attack as opposed to head attack (where appropriate) in heavy smoke situations.
 - Check fire behavior forecasts for smoke and inversion potential.
 - In heavy smoke, give up acres to gain control.
- Implementation: Many techniques can help reduce the exposure of personnel to heavy smoke, such as:
 - Rotating people out of the heaviest smoke area may be the single most effective method.
 - Locate camps and incident command posts in areas that are not prone to inversions.
 - Minimize snag falling, consistent with safety concerns, to avoid putting heavy fuels on the ground that will require mop-up.
 - Changing firing patterns and pre-burning (black lining) during less severe conditions can greatly reduce exposure to smoke.
 - The use of retardant, foam or sprinklers can also significantly reduce the workload and exposure time for holding crews.
