

**National Interagency Coordination Center
Incident Management Situation Report
Monday, July 29, 2019 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity:	Light (111 new fires)
New large incidents:	2
Large fires contained:	2
Uncontained large fires:**	16
Area Command teams committed:	0
NIMOs committed:	2
Type 1 IMTs committed:	2
Type 2 IMTs committed:	4

Nationally, there are 105 large fires being managed under a strategy other than full suppression.

**Uncontained large fires include only fires being managed under a full suppression strategy.

Alaska Area (PL 4)

New fires:	1
New large incidents:	0
Uncontained large fires:	3
NIMOs committed:	1
Type 2 IMTs committed:	2

Chalkyitsik Complex (4 fires), Upper Yukon Zone, BLM. IMT 2 (AK Green Team). Fifteen miles east of Chalkyitsik, AK. Timber. Moderate fire behavior with isolated torching, flanking and backing. Numerous structures threatened.

Cornucopia Complex (9 fires), Upper Yukon Zone, BLM. NIMO (Portland). Twenty-five miles west of Fort Yukon, AK. Timber and brush. Moderate fire behavior with backing, flanking and smoldering. Precipitation occurred over the fire area yesterday.

Swan Lake, Kenai-Kodiak Area, Alaska DOF. Transfer of command from IMT 2 (EA Gold Team) back to the local unit will occur on 7/31. Started on FWS land six miles northeast of Sterling, AK. Timber and short grass. Minimal fire behavior with smoldering. Residences threatened. Area, road and trail closures in effect. Precipitation occurred over the fire area yesterday.

Shovel Creek, Fairbanks Area, Alaska DOF. Twenty miles northwest of Fairbanks, AK. Timber and brush. Moderate fire behavior.

Kobe, Fairbanks Area, Alaska DOF. Twenty-five miles northwest of Healy, AK. Timber and tall grass. Minimal fire behavior.

Little Creek, Tanana Zone, BLM. Started on state land six miles east of Ruby, AK. Timber. Minimal fire behavior.

Predictive Services Discussion: The Four Corner's high pressure area will return to its favored location over the Four Corners, as a weak, dry cold front moves east across the Northern Rockies and draws up some monsoonal moisture to create widely scattered storms across the northern Great Basin and the Northern Rockies. Breezy westerly winds behind the front across the Pacific Northwest and western Montana may lead to the emergence of holdover fires. Scattered storms will be possible across the Midwest and the central Great Plains while the East will remain mostly dry under a warm southwesterly flow. In Alaska, high pressure will begin to develop over the Interior of the state, resulting in another warming trend as convection focuses over the higher terrain of the Alaska and Chugach Ranges and the western portion of the Brooks Range.

Propane Tank Safety

Miscellaneous Fireline Hazards

Liquefied Propane Gas (LPG) tanks are commonly found in the wildland-urban interface and present hazards to firefighters in that environment. LPG tanks may be found in a number of other environments such as motor homes, travel trailers, grills, camp stoves, lanterns, etc. Directly attacking LPG tank fires is a structural fire task involving hazardous materials and should only be attempted by trained personnel using full structural personal protective equipment and equipped with a volume of water adequate to safely attack the fire.

● Boiling Liquid Expanding Vapor Explosions (BLEVE)

- The most recognized hazard with LPG tanks is BLEVE (Boiling Liquid Expanding Vapor Explosions) or sudden complete failure of the tank. Some training courses have directed responders to approach the tank from the sides, believing that the force of the explosion will occur on the ends of the tank. However, this is not a guarantee that you will be safe from projectiles or missiles from the explosion, as they may travel in ALL directions up to 2,500 feet away. Leave the area immediately if you smell propane; hear a rising sound from venting safety devices or see discoloration or deformation of the tank. If you leave the area, get at least 2,500 feet away and do not go down wind or down slope of the leaking propane. BLEVEs are a major hazard to emergency responders!

● Fuel Reduction Around Tanks

- Wildland firefighters may take action to prevent direct flame impingement on LPG tanks by removing wildland fuels in the area. However, be aware that lines from the tank to structures may be above or below ground, and may be cut by tools or equipment. Propane gas is heavier than air, and may move along the ground at some distance, and may ignite when it reaches open flame or another ignition source. Use extreme caution when doing fuel reduction around tanks, and flag any lines you encounter.

● Other Wildland Fire Considerations

- Do not position engines or other apparatus near LPG tanks or downwind / down slope from tanks.
- Do not deploy fire shelters near LPG tanks or downwind / down slope from tanks.

● Cooling Tanks

- In light fuels such as grasses, where any heat exposure to the tank will be very limited, rapid application of cooling water on the outside of the tank above the liquid level can reduce the likelihood of container failure by lowering the external temperature of the shell of the exposed tank. Water should not be directed at the valve safety devices, due to the potential of "icing" the valve closed.
- In heavy fuels where long duration heat exposure to the LPG tank is likely, evacuate all personnel and equipment 2,500 feet away and not down slope or down wind. NFPA says that direct flame impingement protection requires water flow of at least 500 gpm from an unmanned monitor nozzle. This is a situation for properly trained, equipped and supported structural firefighters.
