

National Interagency Coordination Center
Incident Management Situation Report
Saturday, October 5, 2019 – 0530 MT
National Preparedness Level 1

National Fire Activity

Initial attack activity:	Light (148 new fires)
New large incidents:	4
Large fires contained:	2
Uncontained large fires:***	5
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	1
Type 2 IMTs committed:	0

Nationally, there are 11 large fires being managed under a strategy other than full suppression.

*** Uncontained large fires include only fires being managed under a full suppression strategy.

Ten Year Average Fires (2009 – 2018 as of today)	51,485
Ten Year Average Acres (2009 – 2018 as of today)	6,284,477

***Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

***Additional wildfire information is available through the Geographic Areas at <https://gacc.nifc.gov/>

Predictive Services Discussion: The previous day's cold front will quickly move east across the Great Plains and into the Upper Midwest. As it does so, it will draw in moisture from the Gulf of Mexico and become increasingly wet. Widespread showers and storms are expected across the eastern portions of the plains by afternoon. The approaching front will finally flatten the ridge of high pressure over the East and will produce a cooling trend. To the west, a breezy westerly flow is expected to continue along the Rocky Mountain Front. A warming trend will begin across the far west along the Pacific Coast as high pressure begins to build onshore. Dry conditions are expected across a majority of the West with temperatures at or slightly above average.

ATV – Transport

Vehicles/Roads Category

ATV Loading/Unloading

Loading/unloading of ATVs has resulted in serious injury and even death to employees. Only those who have been fully trained in ATV operations should conduct loading/unloading procedures. The following safety measures are recommended:

- Wear all PPE (including gloves, helmet, etc.) until ATV is either secured or unloaded.
- Ensure header board (board placed in front of bed of truck or trailer) is in place and in good condition.
- ATV tire ramps should be secure to trailer or tail gate and on level terrain.
- If possible, use a tilt trailer to haul an ATV. If this is not feasible, try to lower back end of vehicle so slant of loading ramp is reduced. Back into ditch, hillside, or anything else to try and lower back end of vehicle.
- When loading ATV onto vehicle or trailer, keep seated, and lean body weight forward on ATV.
- When unloading ATV, keep seated and keep weight forward. This helps keep ATV from flipping over backwards.
- Never load or unload an ATV with a load on the racks. Load all ATVs empty.

● Securing ATV for transport

ATVs improperly loaded can be dangerous to you and other highway users. Steering can be affected if your load is not properly distributed and if not properly secured, can become dislodged and damage equipment and cause injury or death during a quick stop or crash.

● Drivers are responsible for their load –regardless who actually loads equipment. All drivers are responsible for:

- inspecting the ATV,
- recognizing overloads and poorly balanced weight, and
- knowing the gear loaded on the ATV is securely tied down.

● Securing ATV's:

- Secure ATV in its normal operating position (on all four wheels)
- Set the parking brake and place transmission in gear
- Turn fuel valve OFF
- Use chocks (that fit snugly against wheels) in front and back of ATV. Front end header boards should also block forward movement of ATV.
- Tie down ATV on at least each corner – use tie downs made from one inch nylon strap or greater, with hooks at each end and that have ratcheting buckles (ordinary rope should not be used due to stretching) or tie down straps that will lock in place
- ATVs should never be hauled with a load attached to the cargo racks. Hazard exists of losing the load from the ATV while in transit.
