

National Interagency Coordination Center
Incident Management Situation Report
Monday, October 21, 2019 – 0800 MT
National Preparedness Level 2

National Fire Activity

Initial attack activity:	Light (24 new fires)
New large incidents:	0
Large fires contained:	0
Uncontained large fires:***	5
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	1
Type 2 IMTs committed:	1

Nationally, there are 7 large fires being managed under a strategy other than full suppression.

*** Uncontained large fires include only fires being managed under a full suppression strategy.

Rocky Mountain Area (PL 2)

New fires:	1
New large incidents:	0
Uncontained large fires:	1
Type 1 IMTs committed:	1
Type 2 IMTs committed:	1

Decker, Rio Grande NF, USFS. IMT 1 (GB Team 2). Nine miles south of Salida, CO. Timber and light logging slash. Minimal fire behavior with backing, creeping and smoldering. Numerous structures threatened. Evacuations, area, road, and trail closures in effect. Sage-grouse habitat threatened. Precipitation occurred over the fire area yesterday.

Cow Creek, Grand Mesa, Uncompahgre and Gunnison NF, USFS. IMT 2 (RM Blue Team) mobilizing. Nine miles east of Ridgeway, CO. Timber, brush and tall grass. Moderate fire behavior with creeping, smoldering and backing. Structures threatened. Area, road and trail closures in effect. Precipitation occurred over the fire area yesterday.

***Official prescribed fire accomplishment reporting occurs through agency specific systems of record.

Predictive Services Discussion: The Sundowner wind event that has been bringing gusty dry offshore winds to Southern California for the last few days will weaken today. The easterly Mono Winds of Central California will become active on Wednesday before tapering off on Friday. Gusty westerly Chinook winds will kick up along the Front Range of the Rockies again today and tomorrow before dropping off Wednesday. The Southern High Plains will also be breezy and dry again today. No precipitation is expected over the southwest CONUS for several more days. Elsewhere, a weather system now over the northern plains will slowly drift into Ontario by mid week. A cold front associated with this low pressure system extends south from the storm center all the way to the Gulf States. This front will move east over the next couple of days and will bring a shot of rain to much of the eastern half of the CONUS over these next couple of days, further mitigating the drought conditions previously plaguing the southeastern portion of the country.

Helicopter Landing Area Safety

Aviation Category

The following points should be considered when operating around an unimproved landing site:

- Always wear your personal protective equipment (PPE) when working around an operating helicopter. (Eye, hearing, head.)
- Always get the approval of a flight crewmember or the pilot before approaching an operating helicopter.
- Only approach and depart a helicopter as directed, in a slightly crouched position. Do not run. Keep in pilot's field of vision at all times.
- Never go near the tail of helicopters.
- When loading helicopters in uneven terrain, always approach and depart from the down slope (lower) side and do not hold equipment overhead.
- Remove or secure loose articles prior to working around an operating helicopter.
- Do not reach up or chase after loose objects.
- Be aware of the dust abatement conditions of the landing area, as blowing dust, sand, or rocks caused by the helicopter's rotor wash can be hazardous.
