

National Interagency Coordination Center
Incident Management Situation Report
Friday, January 3, 2020 – 0800 MT
National Preparedness Level 1

National Fire Activity (December 27, 2019 – January 2, 2020)

Initial attack activity:	Light (125 new fires)
New large incidents:	4
Large fires contained:	4
Uncontained large fires:***	1
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally, there are 0 large fires being managed under a strategy other than full suppression.

*** Uncontained large fires include only fires being managed under a full suppression strategy.

***Prescribed fire acres are for reference only and may not reflect the most up-to-date information.

***Official prescribed fire accomplishment reporting occurs through agency specific systems of record.

Predictive Services Discussion: High pressure over the western states will move east to the Continental Divide by Friday night and will allow for the next winter storm system to begin impacting the Pacific Northwest and the Northern Rockies by late evening. Lake effect snow over the Great Lakes will be picked up by a passing front and will move into New England by Saturday afternoon. Elsewhere, a flat and dry westerly flow will develop over the remainder of the country through Monday and will produce seasonal temperatures along with breezy conditions along the Rocky Mountain Front. A weak trough of low pressure will develop over the Great Plains mid-week and will produce a slight cooling trend as it moves east of the Mississippi River on Wednesday. A snowy pattern will redevelop over the northwestern portion of the country Thursday and Friday as another round of moderately strong storms begin to move on shore from the Gulf of Alaska. As this occurs, a strong and windy westerly flow will develop over the northern Great Plains and the Upper Midwest.

AAR part 1

Fire Communication Category

How to conduct an effective After Action Review

An AAR is a professional discussion of an event with the objective to identify successes and failures. It is a tool that leaders, teams, crews and units can use to get maximum benefit from every incident or project. It is essential for wildland firefighters to learn from our mistakes and to capitalize on our successes. It is considered a valuable tool in high-risk professions where the smallest mistakes can lead to disastrous results. ***FYI – an AAR is not a critique and not a forum to assign blame. It's an open, honest and professional discussion for purposes of improvement.***

Once you (the leader/facilitator) have demonstrated that the AAR works and that it will be part of your team's Standard Operating Procedures, the discussion will become more open. Finding out *what* they did is not nearly as important as *why* they did it. Good active listening skills are essential. Do not immediately try to solve or correct the issue, but let it play out. Try to get to the root of the issue. The leader must be a part of the AAR and will have to accept criticism. This is important because the team will be looking for affirmation of the AAR process.

- Have the AAR as soon after an event as possible with all the personnel involved if at all possible.
- The leader's role is to insure there is skilled facilitation of the AAR.
- Make sure everyone participates.
- Pay attention to time.
- Establish clear ground rules: encourage candor and openness, all participants have equal ownership, focus on improving performance, and keep all discussions confidential.
- End on a positive note.

1. ***What was planned?***

Review the intent of the mission

Desired "End State" (what does "Right" look like).

2. ***What actually happened?***

Establish the facts

Pool multiple perspectives to build a shared picture of what happened.

3. ***Why did it happen?***

Analysis of cause and effect

Focus on WHAT not WHO.

Provide progressive refinement for drawing out explanations of what occurred.

4. ***What are we going to do next time?***

Correct Weaknesses

Focus on items you can fix, rather than external forces outside of your control.
