**Predictive Services Discussion:** The Four Corners High will flatten briefly as a cold front pushes east across the Northern Rockies. This will produce pockets of critical fire weather conditions across Wyoming due to breezy westerly winds and low humidities. A second, much weaker surge of monsoonal moisture will begin to move into southeastern Arizona and New Mexico producing isolated mainly dry storms. Humidity levels across the southern Great Basin will remain critically low in the lower to middle single digits during the day and teens at night. Scattered storms will be possible across northern Minnesota and the Upper Peninsula of Michigan. Warm and dry conditions are expected across Alaska as an Arctic high pressure area extends south across the Interior.

## Working with Helicopter Drops

Aviation Category

Consider the following questions when you have a helicopter with a bucket working in your area:

- If the helicopter is a Type 1, increase the distance of standby place from the drop zone.
- Use helicopter drops to knock down or secure a fire area that poses a direct imminent threat to escaping control lines or climbing up ladder fuels.
- Do you have good communications?
- Does the pilot have a clear understanding of the target?
- Are trees and snags in the drop zone?
- Are ground crews clear of the area?
- What are the winds doing?
- What is the turnaround time for the helicopter?
- Are people on the ground aware of the effects of the helicopter's rotor wash?
- Give feedback to the pilot about drop accuracy. Be honest and constructive.
- Be aware that helicopter performance capabilities may be significantly reduced at high altitudes and/or high temperatures.
