

**National Interagency Coordination Center
Incident Management Situation Report
Friday June 5, 2020 – 0730 MT
National Preparedness Level 2**

National Fire Activity:

Initial attack activity:	Light (142 new fires)
New large incidents:	3
Large fires contained:	3
Uncontained large fires:***	9
Area Command teams committed:	0
NIMOs committed:	1
Type 1 IMTs committed:	1
Type 2 IMTs committed:	0

Nationally, there are 4 large fires being managed under a strategy other than full suppression.

*** Uncontained large fires include only fires being managed under a full suppression strategy.

Southwest Area (PL 3)

New fires: 26
 New large incidents: 0
 Uncontained large fires: 3
 Type 1 IMTs committed: 1

Sawtooth, Tonto National Forest, USFS. IMT 1 (SWA Team 1). Seven miles northwest of Superior, AZ. Brush and short grass. Minimal fire behavior creeping and smoldering. Area, road and trail closures in effect.

Sunset, Phoenix District Office, BLM. Thirty-two miles southeast of Prescott, AZ. Brush and tall grass. Minimal fire behavior.

Rafael, Southeast District, Arizona Department of Forestry and Fire Management. Fifteen miles southeast of Nogales, AZ. Brush and tall grass. Minimal fire behavior.

***Prescribed fire acres are for reference only and may not reflect the most up-to-date information.

***Official prescribed fire accomplishment reporting occurs through agency specific systems of record.

Predictive Services Discussion: Today will be a significant lightning day in both the CONUS and in Alaska. The weakening upper low pressure area along the Southern California coast will open up into a trough and quickly move on shore and inland into southern Nevada by afternoon. The approaching disturbance will allow for the development of scattered storms across the Great Basin and the Central Rockies. Utah, Wyoming, and Colorado will take the most lightning. Scattered wet storms will also be possible along a line stretching from central Montana to southeastern Oregon as a cold front pushes inland from the coast. In Alaska, scattered storms are expected across the central and western Interior and isolated storms elsewhere.

Hazard Tree – No Work Zones (NWZ)

Felling Safety Category

Knowing when the exact time a given hazard tree (or compromised section) will fail is extremely difficult, and is, in many cases, an unpredictable task. Given this fact, we need to manage firefighters' exposure to these hazards by creating a safe work area or No Work Zone (NWZ). The size and extent of the NWZ must be determined by onsite conditions, such as terrain, stand structure, and fire impacts on the tree and adjoining trees.

When an identified hazardous tree or trees cannot be felled, then perform an assessment of which areas have too high a risk, and post a lookout to warn the personnel to stay clear of these areas while working in adjacent areas. If hazard still exists before leaving the area, flag the NWZ so that personnel entering the area will be able to recognize the hazard. Use the following failure zone illustrations as examples to help manage firefighter exposure to these identified hazards. Also, remember to include the possibility of the "Domino Effect" to surrounding trees.

Figure 1 – $1\frac{1}{2} \times$ Height of snag

Figure 2 – $1\frac{1}{2} \times$ trunk-to-branch-tip distance

Figure 3 – $1\frac{1}{2} \times$ length of dead top.
