

**National Interagency Coordination Center**  
**Incident Management Situation Report**  
**Friday, June 26, 2020 – 0730 MT**  
**National Preparedness Level 3**

**National Fire Activity:**

Initial attack activity:	Light (99 new fires)
New large incidents:	7
Large fires contained:	7
Uncontained large fires:***	20
Area Command teams committed:	0
NIMOs committed:	1
Type 1 IMTs committed:	2
Type 2 IMTs committed:	2

Nationally, there are 19 large fires being managed under a strategy other than full suppression.

\*\*\* Uncontained large fires include only fires being managed under a full suppression strategy.

#### Southwest Area (PL 4)

New fires:	18
New large incidents:	0
Uncontained large fires:	9
Type 1 IMTs committed:	2
Type 2 IMTs committed	1

**Bighorn**, Coronado NF, USFS. IMT 1 (NR Team 1). Five miles northeast of Tucson, AZ. Chaparral, brush and timber. Active fire behavior with uphill runs, backing and short-range spotting. Numerous structures threatened. Evacuations, road, trail and area closures in effect.

**Tadpole**, Gila NF, USFS. Twelve miles north of Silver City, NM. Timber, brush and chaparral. Moderate fire behavior with backing and flanking. Structures threatened. Road, trail and area closures in effect.

**Bringham**, Apache-Sitgreaves NF, USFS. Twenty-two miles north of Morenci, AZ. Brush, short grass and timber. Moderate fire behavior with flanking, backing and creeping. Structures threatened. Road, trail and area closures in effect.

**Mangum**, Kaibab NF, USFS. IMT 2 (SW Team 3). Twenty-four miles southeast of Fredonia, AZ. Timber, brush and short grass. Moderate fire behavior with running, flanking and torching. Numerous structures and energy infrastructure threatened. Evacuations, road, trail and area closures in effect.

**Bush**, Tonto NF, USFS. IMT 1 (SW Team 1). IMT is also managing the Central fire. Thirty-eight miles northeast of Mesa, AZ. Brush and tall grass. Moderate fire behavior with uphill runs, torching and smoldering. Road, trail and area closures in effect.

**Central**, Tonto NF, USFS. Four miles east of New River, AZ. Brush and short grass. Minimal fire behavior with smoldering. Road, trail and area closures in effect.

**Vics Peak**, Cibola NF, USFS. Thirty miles north of Truth or Consequences, NM. Active fire behavior with short crown runs, wind-driven runs and backing. Road, trail and area closures in effect.

**Good**, Gila NF, USFS. Twenty-nine miles north of Silver City, NM. Timber, brush and tall grass. Moderate fire behavior with backing, creeping and smoldering.

**Aquila**, Central District, Arizona DOF. One mile east of Tramonto, AZ. Chaparral, brush and short grass. No new information. Last report unless new information is received.

## Alaska Area (PL 2)

New fires:	1
New large incidents:	5
Uncontained large fires:	1

**Isom Creek**, Upper Yukon Zone, BLM. Started on state land 17 miles southwest of Stevens Village, AK. Timber and brush. Moderate fire behavior with smoldering. Area closures in effect. Precipitation occurred over the fire area yesterday.

\* **Bearpaw Mountain**, Tanana Zone, BLM. Started on NPS land 61 miles west of Healy, AK. Timber and tall grass. Moderate fire behavior with smoldering, creeping and group torching. Last narrative report unless significant activity occurs.

\* **Tivehvun Lake**, Upper Yukon Zone, BLM. Started on FWS land 31 miles south of Christian, AK. Timber and tall grass. Moderate fire behavior with smoldering and creeping. Last narrative report unless significant activity occurs.

**Taylor Creek**, Southwest Area, Alaska DOF. Previously reported incident. Seventy-eight miles southwest of Stoney River, AK. Timber and grass. Minimal fire behavior. Last narrative report unless significant activity occurs.

**Titnuk Creek**, Southwest Area, Alaska DOF. Previously reported incident. Ninety-seven miles south of Stoney River, AK. Timber grass and understory. Minimal fire behavior. Last report unless significant activity occurs.

\* **Old Lost**, Upper Yukon Zone, BLM. Started on FWS land 22 miles northeast of Stevens Village, AK. Timber grass and understory. Minimal fire behavior with smoldering. Last narrative report unless significant activity occurs.

\* **Gold Mountain**, Tanana Zone, BLM. Started on state land 23 miles northwest of Kallands, AK. Timber and tall grass. Minimal fire behavior. Last narrative report unless significant activity occurs.

**Predictive Services Discussion:** A weak area of high pressure will develop over the Inland West and will produce a thermal trough over the southern Great Basin that will extend from the Arizona Strip northwest into the Modoc in California. Increasing heat will develop. Breezy winds will accompany the heat across northern California as a very weak disturbance moves southeast into the state late in the afternoon. Isolated storms will be possible along the Continental Divide as a trough of low pressure begins to depart the region. In Alaska, scattered showers and storms will continue across the eastern interior as a cold front slowly pushes east across the state. New England will continue to receive much needed moisture from showers and storms as a cold front moves north across the region.

<http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

This Day in History is a brief summary of a powerful learning opportunity and is not intended to second guess or be judgmental of decisions and actions. Put yourself in the following situation as if you do not know what the outcome will be. What are the conditions? What are you thinking?  
What are YOU doing?

## Dude Fire

**Incident Summary:** June of 1990 will long be remembered as one of the hottest months in Arizona history. On June 26<sup>th</sup> the temperature rose to record temperatures of 122" F in Phoenix and to 106" F in Payson. In addition to the extreme temperatures, Arizona had been in a severe 3-year drought, the combination producing a critically high fire danger throughout the state, especially the Mogollon Rim country and the Tonto National Forest north of Payson. Fuels in the area are primarily ponderosa pine with an understory of mixed oak, manzanita, needle and leaf litter, and scattered large (greater than 6-inch diameter) dead logs. Much of the understory brush is heavily draped with very dry pine needles. Live fuel moisture of the manzanita and oak is very low (76%), fine dead fuel moisture is 3% and 8% for larger dead fuels.

At 1230 June 25<sup>th</sup>, a dry lightning storm starts a fire under the Mogollon Rim on the Payson Ranger District, Tonto NF Arizona. The fire is on a steep SW facing slope at 6400 ft. elevation. At 1330, the fire is estimated from the air at 5 acres, 50 acres one hour later, and over 100 acres by 1615 with a spot fire one mile east of the main fire. By 1800 a Type II IMT has arrived and a Type I IMT and 18 crews had been ordered. The fire is being pushed by brisk down canyon winds and is 1900 acres by 0500 on June 26<sup>th</sup> and is threatening the forest subdivision of Bonita Creek Estates. A convection column, aided by combustion, begins forming over the fire by 1000. The column continues to grow and becomes a fully mature thunderstorm by 1400. Radio and frequency issues are causing a breakdown in communication between the crews and the overhead team. The teams are transitioning mid-shift resulting in confusion between the crews and supervision. The thunderstorm begins to decay creating strong downbursts channeled by the topography, causing dramatic down and across slope fire spread on nearly all sides of the fire. Members of the Perryville Fire Crew will not be able to escape from the fast and erratic fire spread. **Five are injured. Six will die on the fireline.**

## Discussion Points:

The fire behavior indicator system “Look Up, Look Down, Look Around” was developed in response to this tragic fire.

- Using Look Up, Down and Around (Operational Engagement section, green) in the [Incident Response Pocket Guide \(IRPG\), PMS 461](#), what indicators are most significant in your area to let you know the fire behavior may become problematic?

The Haines Index, a measure of the atmosphere's effect on a fire's growth potential, was adopted for inclusion on Fire Weather forecasts issued by the National Weather Service.

- Review and discuss the Haines Index information (Other References section, white) in the [IRPG](#).

In his paper “[LCES and Other Thoughts](#)”, Paul Gleason writes about kneeling next to one of the Perryville firefighters and of his promise to help end needless fatalities and near misses.

Review LCES in the [IRPG](#) (Operational Engagement section, green) and discuss how you and your crew establish and maintain LCES.

- Discuss the difference between establishing LCES and maintaining LCES.
- What are common barriers to maintaining LCES?

We honor these firefighters today by learning about the lessons they learned the hard way and by using this tragic event as a tool to keep ourselves and our crews safe on the fireline. Use the following resources:

- [Dude Fire Staff Ride](#)
- [Fire Investigation Report](#)
- [Dude Fire - Fire Weather Behavior](#)
- ["LCES and Other Thoughts" by Paul Gleason](#)
