

**National Interagency Coordination Center  
Incident Management Situation Report  
Friday, March 20, 2020 – 0800 MT  
National Preparedness Level 1**

**National Fire Activity (March 13 – March 19, 2020)**

Initial attack activity:	Light (377 new fires)
New large incidents:	11
Large fires contained:	16
Uncontained large fires:***	3
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally, there is one large fire being managed under a strategy other than full suppression.

\*\*\* Uncontained large fires include only fires being managed under a full suppression strategy.

## Southern Area (PL 1)

New fires: 280  
 New large incidents: 9  
 Uncontained large fires: 4

\* **Windmill**, Texas A & M Forest Service. Started on private land 30 miles south of Hebbronville, TX. Brush and tall grass. Moderate fire behavior. Structures threatened.

\* **Lee Cook Road (46)**, Florida Forest Service. Four miles northeast of Cannon Town, FL. Short grass. Minimal fire behavior.

\* **4 Point**, National Forests in Mississippi, USFS. Five miles southwest of Clara, MS. Southern rough. Minimal fire behavior with creeping and smoldering.

\* **Range 6 A**, National Forests in Mississippi, USFS. Six miles east of McLaurin, MS. Southern Rough and Short Grass. Active fire behavior with running, flanking and backing. Last narrative report unless significant activity occurs.

\*\*\*Prescribed fire acres are for reference only and may not reflect the most up-to-date information.

\*\*\*Official prescribed fire accomplishment reporting occurs through agency specific systems of record.

**Predictive Services Discussion:** The active weather pattern continues along the West Coast. Several cool and wet systems will move southeast across the West over the next week providing needed moisture to California, Oregon, and Washington. The Southwest and Great Basin will also benefit from the moisture as the western half of the country prepares to enter spring. In the East, overall warm and dry conditions are expected across the Deep South and Florida while an active Subtropical Jet Stream will bring moisture to Central-North Texas, Oklahoma, Arkansas through the Mid-Atlantic States. Temperatures overall will be below average in the West and above average in the East. In Alaska, the active pattern will continue across the Interior and will bring additional late season snow. However, the Kenai Peninsula and the Mat-Su Valley will remain mostly dry for the next week.

## Refusing Risk

*Operational Engagement Category*

Every firefighter has the right and obligation to report safety problems and contribute ideas regarding their safety. Supervisors are expected to give these concerns and ideas serious consideration. When an individual feels an assignment is unsafe, they also have the obligation to identify, to the degree possible, safe alternatives for completing that assignment. Turning down an assignment is one possible outcome of managing risk.

- A turn down is a situation where an individual has determined an assignment cannot be undertaken as given, and they are unable to negotiate an alternative solution.
- A turn down must be based on an assessment of risks and the ability of an individual or organization to control those risks.
- A situation may be a candidate for a turn down if:
  - There is a violation of safe work practices.
  - Environmental conditions make the work unsafe.
  - The forces lack the necessary qualifications or experience.
  - Defective equipment is being used.
- The following steps will be used when turning down an assignment:
  - The individual will directly inform their supervisor that they are turning down the assignment as given. (Document using criteria outlined in the risk management process.)
  - Supervisor will notify the Safety Officer immediately upon being informed. In the absence of a Safety Officer, the appropriate Section Chief or Incident Commander will be notified. This step provides accountability for decisions and initiates communication of safety concerns.
  - If the supervisor requests another resource to perform the assignment, he/she is responsible for informing that resource that the assignment has previously been refused and the reason(s) why.
  - The safety hazard should be documented by the submission of a SAFENET or SAFECOM.
- These actions do not stop an operation from being carried out. This protocol is integral to the effective management of risk as it provides timely identification of hazards to the chain of command, raises risk awareness for both leaders and subordinates, and promotes accountability.
