

**National Interagency Coordination Center
Incident Management Situation Report
Thursday, May 7, 2020 – 0800 MT
National Preparedness Level 1**

National Fire Activity

Initial attack activity:	Light (119 new fires)
New large incidents:	2
Large fires contained:	0
Uncontained large fires:***	6
Area Command teams committed:	0
NIMOs committed:	1
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally, there is 1 large fire being managed under a strategy other than full suppression.

*** Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 1)

New fires: 30
 New large incidents: 2
 Uncontained large fires: 4

* **5 Mile Swamp**, Florida Forest Service. Two miles south of Milton, FL. Southern rough and tall grass. Extreme fire behavior.

* **020306**, Florida Forest Service. Four miles east of Sandestine, FL. Southern rough. Extreme fire behavior.

343, Florida Forest Service. Ten miles west of Williston, FL. Timber. Moderate fire behavior.

L-67, Florida Forest Service. Nineteen miles west of Doral, FL. Timber. Moderate fire behavior.

***Prescribed fire acres are for reference only and may not reflect the most up-to-date information.

***Official prescribed fire accomplishment reporting occurs through agency specific systems of record.

Predictive Services Discussion: A strong high pressure ridge will quickly develop along the West Coast and extend north from Mexico through western Canada and into Alaska. The thermal trough over the Southwest will surge north to extend north across the Sierra and Cascades where snowpack will melt at an even faster rate. Southerly flow across central Texas will pull tropical moisture north into the great plains where it will be tapped into to create scattered wet storms over eastern Colorado and western portions of Kansas and Oklahoma. A low pressure area in the southern Gulf of Alaska will send moisture north to create showers over the Kenai Peninsula and across the northern Alaska Panhandle near King Salmon.

ATV – How to Properly Ride and Operate

Vehicles/Roads Category

Riding an ATV correctly allows the operator to operate and control the machine more easily, and react more quickly to changes in terrain and environment. Proper riding posture includes:

- ✓ head and eyes up, looking forward;
 - ✓ shoulders relaxed, with elbows bent slightly;
 - ✓ hands on the handlebars;
 - ✓ knees in toward the gas tank;
 - ✓ feet on the footrests, toes pointing straight ahead; and
 - ✓ back should be straight but not tense.
-
- To turn an ATV, keep most of your body weight on the outside foot peg and lean your upper body into the turn. Never lower your foot to the ground for stability—could cause ejection if foot is caught by tire.
 - When climbing hills, shift your body weight forward to keep the front wheel(s) on the ground.
 - If stopped while going uphill, do not apply the rear brake only. Apply equal pressure to both front and rear brakes, but never only to the rear brake. Get off the machine and turn it around to proceed down the hill.
 - When going downhill, keep the engine running and in low gear, apply both front and rear brakes with even pressure and avoid sharp turns. Slide body forward on seat towards gas tank, keeping body weight back by leaning backwards. This will help keep weight on back wheels and lessen the potential to flip ATV over forward. Avoid "side hill" situations. When they are unavoidable, lean into the hill.
 - When carrying a load uphill, if possible, place load on the front of the ATV to help keep the front end of the ATV from flipping over. If going downhill, place load on back of ATV to help keep the ATV from flipping over forward. If loads cannot be adjusted, (drip torch mounted on back), try to equalize the load on front and back if possible.
 - Only operate an ATV under the conditions for which you have been trained, qualified for, and are experienced in riding.
 - As a last resort to avoid an impending collision, roll off the vehicle and kick yourself free of it.
