Predictive Services Discussion: Upper-level ridging will continue over the West but an upper-level shortwave trough will approach the Pacific Northwest. A weak upper-level trough will slowly move to the east over southern California and the Desert Southwest, and a deep upper-level trough will move over the Northeast and exit the eastern US. Precipitation is expected in western Washington and northwest Oregon with snowfall in Upstate New York into New England as a cold front slides through the Northeast. Warm and dry conditions will continue over much of the West.

Hazard Tree Felling – Hang-Ups

Felling Safety Category

Felling a hung-up hazard tree is a particularly hazardous and complex task. Safely felling a hang-up requires extreme caution and expertise.

The following are some topics sawyers should review during tailgate safety discussions to address felling hang-up hazard trees:

Size up and Evaluation:

- Cut/No Cut (walk-away). Is tree secure and does it need to come down?
- What type of hang up? In a fork, pinched between two trees, or resting on limbs?
- Vertical hang ups have increased complexities.
- Condition of all relevant trees; live, dead, rot, etc. Does the hang up tree have any weak areas that could fail?
- Obscured view of top?
- If sawyer is unsure of outcome do not attempt to cut leaner.

Operational Considerations:

- Escape routes for unforeseen circumstances?
- Consider falling trees as a group.
- Consider face cuts versus slash cuts for directional control.
- Rope Technique allows increased distance from danger zones

Alternative Mitigations:

- Blasting
- Heavy equipment/cable
- No Work Zones

Discuss any personal lessons learned with hang-up trees that you may have experienced.
