Predictive Services Discussion: An upper low will track over the northern Plains with an upper-level shortwave trough approaching the Pacific Northwest. A cold front will stall over the southern Great Basin and central Rockies but continue advancing eastward across the northern Plains with strong winds just ahead and behind it. Lingering showers and isolated thunderstorms are expected in the Colorado Rockies into the northern Plains with cooler temperatures, higher RH, and light showers over the Pacific Northwest and Northern Rockies. Dry conditions will continue across the Great Basin and Desert Southwest. Rain bands from Tropical Storm Beta will bring potentially heavy rainfall to portions of the Texas and Louisiana coasts.

ATV – Safety

Vehicles/Roads Category

The use of ATVs for wildland fire suppression and prescribed fire operations has increased dramatically over the last ten years. Note: Several agencies have required training for ATV operations (check your agency's requirements).

Most injuries associated with ATVs occur when:

- the driver loses control (When the operator encounters a change of terrain or swerves to avoid an obstacle, it causes an abrupt change of balance and loss of control),
- the vehicle rolls over,
- the driver or passenger is thrown off,
- the operator's loss of attention to what, where, and how an ATV is being operated,
- or there is a collision with a fixed object.

Identified contributing factors to ATV accidents include:

- rider inexperience,
- excessive speed combined with rough terrain, can create enough pitch and bounce to cause the operator to lose control of the vehicle,
- lack of helmet use,
- the ATV is improperly loaded or load weight exceeds vehicle operation capacity,
- or the operator carries a passenger that affects the operator's control and operation of the ATV.

Safety measures for ATV use include:

- Conduct pre-ride inspection which should include checking tires, throttle cable, front and rear brakes, lights and switches, oil and fuel, chain or driveshaft, air filter, clean out of weeds and other debris from around engine and other hot components, and the chassis for any defects or wear.
- Single riders only – Injuries frequently occur to passengers, therefore riding double should not be permitted.
- Always wear PPE – helmets, eye protection, and protective clothing. Appropriate helmets are those designed for motorcycle (not firefighting) use and should include safety visors/face shields, goggles, or safety glasses for eye protection.
- Use headlights to improve visibility by other vehicles.
- Maintain speeds acceptable for riding conditions, especially over uneven terrain.
- Traversing slopes should be avoided.
- Mounted or towed loads should not exceed the manufacturer's recommendation and should be properly mounted so that weight transfer does not affect the center of gravity of the machine – mounting a tank (e.g., drip torch) on the rear of the vehicle increases the chances for a rear turnover.
- Do not drive on public roads – collisions with automobiles on public roads are the most common cause of fatal ATV accidents. It may be illegal to operate an ATV on public roads – check your state's laws.
