\*\*\*Official prescribed fire accomplishment reporting occurs through agency specific systems of record.

**Predictive Services Discussion:** A broad upper ridge building over the West will yield increasingly hot, dry, and unstable conditions for California, the Desert Southwest, and the Great Basin. Fires actively burning in Northern California will be challenged by near or record-breaking heat and very low relative humidities. A cold front will move across the Northern and Central Great Plains and produce dry conditions and breezy winds. No precipitation is forecast west of the Mississippi River.

## Retardant & Water Drop Safety

*Aviation Category*

Having retardant (jell, foam), paracargo, and water dropped on a fire is a routine event. However, there are risks associated with drops that can pose serious threats to personnel and equipment. Consider the following for all drops:

- Be aware of the location and flight patterns (final approach, drop zone, exit) of aircraft during drop operations.
- Be sure you have positive contact with the pilot before the drop.
  - Clear all persons, vehicles, and animals from the danger zone prior to the arrival of the aircraft.
  - Beware of “streamers” or parachutes that don’t open.
- Personnel can be injured by the impact of material dropped by aircraft. Clear personnel out of the target area before the drop is conducted. If an individual is caught unaware in a drop zone:
  - Hold your hand tool away from your body.
  - Lie face down with hardhat in place and head toward the oncoming aircraft.
  - Grasp something firm to prevent being carried or rolled about by dropped liquid.
  - Do not run unless escape is ensured.
  - Get clear of dead snags and tops.
  - Be aware of rolling debris below the drop site in steep terrain.
- Working in an area covered by retardant should be done with caution due to slippery surfaces.
- If possible, wash the retardant off your skin to prevent irritation.
