

**National Interagency Coordination Center  
Incident Management Situation Report  
Wednesday, April 21, 2021 – 0730 MDT  
National Preparedness Level 2**

**National Fire Activity:**

Initial attack activity:	Light (108 fires)
New large incidents:	1
Large fires contained:	1
Uncontained large fires: ***	2
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	1

Nationally, there is 1 fire being managed under a strategy other than full suppression.

\*\*\*Uncontained large fires include only fires being managed under a full suppression strategy.

\*\*\*Additional wildfire information is available through the Geographic Areas at <https://gacc.nifc.gov/>

**Predictive Services Discussion:** Upper-level troughing will deepen over the West Coast with upper-level troughing broadening across the West today. Upper-level winds will strengthen over the Southwest as a result with scattered rain and snow stretching across portions of the Great Basin and Colorado Rockies. Critical fire weather conditions will develop across Arizona and western New Mexico with locally extremely critical winds and relative humidity possible. Dry and breezy conditions are also likely in portions of northern California and the western Great Basin. Dry and windy conditions are expected from central Georgia through the Carolinas as a cold front pushes into the Atlantic with drier conditions stretching across portions of the South behind the front. Rain and snow are likely across the Mid-Atlantic and Northeast as a surface cyclone tracks to the northeast.

## UNEXPLODED ORDNANCE SAFETY

*Miscellaneous Fireline Hazards*

Unexploded ordnance (UXO) is most likely to be encountered on military or former military sites. UXO poses risk of injury or death to anyone in the vicinity.

### Situation Awareness

- Early identification of potential UXO is the first and most important step in reducing risk posed by UXO.
- Many types of UXO may be encountered:
  - Small arms munitions
  - Guided missiles
  - Rockets
  - Projectiles
  - Mortars
  - Bombs
  - Grenades
  - Sub munitions
- UXO may be found fully intact or in fragments. All UXO presents a potential hazard and should be treated as such.
- Deteriorated UXO presents a particular hazard because it may contain chemical agents that could become exposed.

### Hazard Control

- If you see UXO, stop and do not move closer.
- Isolate and clearly mark the area.
- Deny entry to others.
- Never transmit radio frequencies near UXO.
- Never remove anything near UXO.
- Never touch, move, or disturb UXO.
- **Keep a minimum of 1,000 feet away** from areas on fire that contain suspected UXO.
- Report discovery of UXO to your immediate supervisor and/or dispatch.
- U.S. Army Operations Center for incidents involving explosives and ammunition:  
(703) 697-0218.
