Predictive Services Discussion: An upper low will swing through the Northwest and into the Northern Rockies with ridging breaking down over the West. A cold front will push south across Montana into Wyoming with a Pacific cold front moving through northern California and Nevada. Elevated to critical winds and relative humidity are expected along and east of the Oregon Cascades, northern California and the Sierra, much of the Great Basin, southwest Wyoming, and northwest Colorado. Winds will be westerly ahead of the front with northerly winds behind the front. Gusty southerly winds amid low relative humidity is also forecast for eastern Wyoming, the northern Plains, and western Minnesota. Behind the front tonight, gusty north to northeast winds with poor relative humidity recovery will create elevated conditions for northern California and southwest Oregon. Dry thunderstorms are possible in southern Montana as well as east-central Nevada on the edge of monsoon moisture. Isolated to scattered mixed wet and dry thunderstorms are forecast in northeast Washington, the Idaho Panhandle, and northwest Montana, but temperatures will be much cooler. Deeper monsoon moisture over the Southwest, much of Utah, and Colorado will fuel wet thunderstorms.

Unburned Fuel Between You and The Fire

Operational Engagement Category

It is important for firefighters to recognize Watch Out Situation #11, unburned fuel between themselves and the fire. Often it is not possible or practical for direct attack on a fire. Before attempting indirect attack and any time the firefighter is in a position where there is unburned fuel between them and the fire, the following questions must be addressed immediately:

- Can you see the fire or are you in contact with someone who can? Discuss situations you might find yourself in where you are out in the green and cannot see the fire. What can you do?
- Is fire spread in a direction away from you? Do you consider the potential for fire spread? Are you safe if the wind switches?
- Will your position be defensible when the fire reaches you? Talk about what must be understood when building indirect line or approaching a fire through the green.
- Is your line anchored? Discuss how you anchor indirect line.
- Are your escape routes and safety zones adequate? What is adequate?
- Are weather indicators constantly changing?
- To reduce the risks:
 - Post lookouts.
 - Consider a different location.

Review situations where you constructed indirect line or approached a fire through the green and how you provided for your safety.
