**Predictive Services Discussion:** The upper low will likely track over eastern Idaho moving into Wyoming late in the day with troughing extending into the Southwest. The cold front will likely stall and weaken across northern Arizona and New Mexico while pushing east across the central and northern Plains. Dry and breezy conditions are likely ahead of the cold front across portions of the central and northern Plains into Minnesota with breezy conditions also forecast in the Four Corners area. Scattered to numerous thunderstorms are possible across Utah and Colorado though Wyoming and eastern Montana into the central and northern Plains with severe weather likely in parts of the central and northern High Plains. Isolated thunderstorms are also possible in northern Arizona and northwest New Mexico as well as eastern Idaho. Scattered showers and isolated thunderstorms are possible in northern Washington into the northern Idaho Panhandle. Temperatures will remain below normal for much of the West, with the greatest departures across the Great Basin, Wyoming, and Montana. Heavy rain is likely in portions of New England with cool and wet conditions continuing in much of Alaska.

## PARKING AN ENGINE ON THE FIRELINE

Vehicles/Roads

You've been engaged in mobile attack on the left flank of a fire for over an hour. Every time you come close to hooking the head of the fire, a wind pulse pushes it out of your reach. It seems the Incident Commander (IC) is asking for progress reports every five minutes. Ahead the fire is burning onto a steep rocky slope, looks like it's hose packs from here...

When fighting wildland fire, there are occasions when crews must leave their engines and equipment to implement suppression tactics. In doing so, fire equipment remains the responsibility of all crew members and its safety must be seen to. In the heat of the moment, with pressures to get to work, it can be hard to remember to pause and think about things like where we park our vehicles.

When parking vehicles on or near wildfire incidents:

- What do you look for in a fireline parking spot? Look up, look down, look all around.
  - Look for cold black, bare soil, sparsely vegetated areas, plowed fields, or other natural or humanmade barriers. Be careful to not get stuck in soft soils.
  - Complete a walk around looking for ash pits, penetrating stobs, unburned adjacent fuel, snags, or other hazards that may damage the apparatus.
  - Do not block the access or egress of others. Be careful to not block dozer lines, safety zones, or helispots. Back in and face your danger when turning around. Chock your tires.
- What types of situations may require you to park your vehicle in unburned fuels?
- What should be considered when leaving an individual with a fire vehicle?

The following mental checklist and flowchart can be used to ensure the safety of yourself and your equipment.

### Is your truck S.E.C.U.R.E.?

**S**et parking brake

**E**nvironmental hazards mitigated

**C**hock the wheels

**U**nder carriage inspected

**R**oll up windows

**E**nsure equipment is safe to leave
