**Predictive Services Discussion:** An upper low over Idaho this morning will move quickly through Montana into the northern Plains today and tonight. A strong upper low will move into southern British Columbia during the afternoon while upper ridging continues over the southern US with a upper low over. A few showers are possible across northern Washington in association with the upper low over British Columbia with light snow possible over the higher elevations. Breezy/dry conditions are forecast for the interior Northwest, Great Basin, and Northern Rockies, but temperatures will continue to be near to below normal. Scattered showers and thunderstorms are expected for eastern Montana with more numerous wet thunderstorms for the northern Plains into western Minnesota where some thunderstorms could become severe. Monsoon moisture will move slowly into southeast Arizona and much of New Mexico with isolated to scattered thunderstorms forecast. Hurricane Henri will make landfall along the eastern Long Island to Rhode Island coast this afternoon and evening. Strong winds, heavy rainfall with flooding, and coastal flooding due to the storm surge will occur in Long Island and southern New England.

## COMMON DENOMINATORS OF FIRE BEHAVIOR ON TRAGEDY FIRES

Weather / Fire Behavior Category

Use the *Incident Response Pocket Guide (IRPG), PMS 461*, to review and discuss the five major common denominators of fire behavior on fatal and near-fatal fires. These common denominators have been identified through studies of tragedy fires. It is important for firefighters to readily recognize them to prevent future tragedies.

Such fires often occur:

1. On relatively small fires or deceptively quiet areas of large fires.
2. In relatively light fuels, such as grass, herbs, and light brush.
3. When there is an unexpected shift in wind direction or in wind speed.
4. When fire responds to topographic conditions and runs uphill.
5. Critical burn period between 1400 and 1700.

Alignment of topography and wind during the critical burning period should be considered a trigger point to reevaluate tactics.

Blowup to burnover conditions generally occur in less than 60 minutes and can be as little as 5 minutes.

A tactical pause may be prudent around 1400 for reevaluating your situational awareness of topography, fuels, and weather.

It can be used as an opportunity to remember that this is the beginning of a dangerous part of the day for fighting fires and increased caution is in order.
