Predictive Services Discussion: An upper low over southern Canada will weaken as it moves eastward with an upper-level trough moving onto the Pacific Northwest coast in the evening. Upper-level ridging will continue over the Southeast extending west into New Mexico and north into the Great Lakes and Northeast. Dry and breezy conditions are likely for much of the Great Basin, Sierra, and central Rockies in the afternoon and evening. Isolated monsoonal thunderstorms are likely in southeast Arizona and New Mexico. Scattered showers and thunderstorms are forecast ahead of a cold front over the northern Plains into the western Great Lakes, but storms are unlikely to bring significant rainfall to northeast Minnesota. Temperatures will be near to below normal for California, the Northwest, Northern Rockies, and northern Plains but will be above normal for the Southwest, southern Great Basin, Colorado Rockies, central and southern Plains, and much of the eastern US including the Great Lakes.

Helicopter Landing Area Safety

Aviation Category

The following points should be considered when operating around an unimproved landing site:

- Always wear your personal protective equipment (PPE) when working near an operating helicopter (eye, hearing, head, etc.).
- Always get the approval of a flight crew member or the pilot before approaching an operating helicopter.
- Only approach and depart a helicopter as directed. Use a slightly crouched position. Do not run. Always keep in the pilot's field of vision.
- Never go near the tail of helicopters.
- When loading helicopters in uneven terrain, always approach and depart from the down slope (lower) side and do not hold equipment overhead.
- Remove or secure loose articles prior to working around an operating helicopter.
- Do not reach up for or chase after loose objects.
- Blowing dust, sand, or rocks caused by the helicopter's rotor wash can be hazardous. Institute dust abatement actions at the landing area if necessary.
