Predictive Services Discussion: Weak ridging aloft is forecast over the Northwest into the Northern Rockies as an upper-level trough exits the region and into the northern Plains and Great Lakes. A cold front will slide south and east across the central Plains into the Midwest and western Great Lakes with a stalled, weakening front draped west-to-east through central Nevada and northern Utah. Gusty northeast offshore over southwest Oregon and northern California will weaken today. Dry and breezy conditions are likely in portions of southern Wyoming, western and northern Colorado, and across portions of inland southern California. Poor overnight RH recovery will continue for much of non-coastal California and the Great Basin. Strong to severe thunderstorms are forecast in the Upper Midwest to western Great Lakes and stretching west into the central Plains. Much of Minnesota including the drought-stricken northeast will see wetting rain. Isolated monsoonal thunderstorms are likely over the higher terrain in New Mexico, Arizona, and southern/central Colorado. Hurricane Ida may begin impacting the northern Gulf Coast tonight with gusty winds and bands of thunderstorms.

Attempting A Frontal Assault On A Fire

Operational Engagement Category

Attempting a frontal assault on a fire is Watch Out Situation #10. It is a potentially dangerous tactic.

If your tactics include a frontal assault, adequately address the following before engaging the fire:

- Has the fire been scouted and sized up? Who will scout and size up a fire and what are they looking for?
- Is your position defensible? List what makes a firefighter's position defensible (anchor points, safety zones, escape routes, etc.).
- Are escape routes and safety zones adequate? Review what constitutes an adequate safety zone and escape route.
- Do you have an anchor point? How would you establish an anchor point for a frontal assault on a fire?
- Do you have adequate resources to complete the assault? Discuss things you need to consider. For example, if the frontal assault fails, do you have backup?
- Are you informed on strategy, tactics, and hazards? Consider what could happen if someone has implemented a different approach; for example, the Incident Commander (IC) has a burnout operation planned while you are attempting frontal assault.
- Is the terrain favorable to holding the fire? Discuss ways the terrain will influence where you will make a stand.
- Are you relying on aircraft to support the operation? Any operation, especially frontal assault, should not need air resources to be completed safely.

To reduce the risks, reassess your tactics, post lookouts, and identify situations in which firefighters may be enticed to attempt frontal assault on a fire. Review why this may or may not be a good idea.
