Predictive Services Discussion: High pressure aloft will strengthen over the central Rockies while low pressure moves off the California coast. Temperatures will be well above normal for most of the Intermountain West with a few record highs possible over the northern Great Basin and Northern Rockies. Low relative humidity will continue for the northern Intermountain West with poor recovery at night for mid-slopes and ridges. Moisture from the monsoon will move north through California into Oregon during the day and bring the threat for isolated mixed wet and dry afternoon thunderstorms. Monsoonal thunderstorms are forecast for the Southwest, southern California, southern Great Basin, and Colorado Rockies with potential for flash flooding in Arizona, the southern Great Basin, and southern California.

We strongly advise the use of proper personal protective equipment (PPE).
