Predictive Services Discussion: Upper-level ridging will amplify over the West and into western Canada with well above normal temperatures in much of California, the Pacific Northwest, and Northern Rockies. Low relative humidity will accompany the well above normal temperatures, with the lowest relative humidity from eastern Washington into northwest Montana. Elevated moisture will stream northward over the Northwest, northern Great Basin, and Northern Rockies. Isolated to scattered mixed wet and dry thunderstorms are forecast from northern California through Oregon and eastward across central and southern Idaho and southwest Montana. Cloud cover and smoke may limit thunderstorm coverage. Scattered to widespread wet thunderstorms are expected in much of the Great Basin, Sierra, Southwest, southeast California, Colorado, and Wyoming. Thunderstorms are likely over northern Minnesota into the Upper Peninsula of Michigan.

SAFENET

Fire Communication Category

The SAFENET system is a way for firefighters and support staff to report unsafe or unhealthy situations and near-misses. SAFENET is an easy, quick way to report a safety concern. It allows firefighters to be involved in the daily job of being safe and keeping others safe by documenting and helping to resolve safety issues. It is also a way for fire managers to hear about and correct hazardous conditions, collect and track important safety data, and identify trends that could be developing.

Here are some facts about SAFENET and how it works:

- Individuals who observe or are involved in an unsafe situation should initiate immediate corrective action, if possible. The occurrence should then be reported via SAFENET.
- Reports should identify unsafe situations in wildland fire, all-hazard operations, training, and other related work environments.
- SAFENET is a confidential database. Users are encouraged but not required to put their name and contact information on the report.
- SAFENET reports are sanitized to display safety and health-related information only, and they will not identify the names of individuals, crews, or other resources.
- If the reporting party did not observe the situation first-hand, the SAFENET report will likely not be published. Instead of filing a report, encourage those who were directly involved to do so.
- **SAFENET reports** that do not include the name of the incident and/or location of the event will not be posted.
- **SAFENET reports** that contain unprofessional content (e.g., personal attacks/slander, character defamation) will not be posted, or the offensive comments will be removed prior to posting.
- There is no punishment or penalty for filing a SAFENET report, nor is it mandatory.
