

**National Interagency Coordination Center
Incident Management Situation Report
Friday, October 1, 2021 – 0730 MDT
National Preparedness Level 3**

National Fire Activity:

| | |
|------------------------------|------------------|
| Initial attack activity: | Light (56 fires) |
| New large incidents: | 2 |
| Large fires contained: | 6 |
| Uncontained large fires: *** | 33 |
| NIMOs committed: | 0 |
| Type 1 IMTs committed: | 5 |
| Type 2 IMTs committed: | 11 |

Nationally, there are 31 fires being managed under a strategy other than full suppression.

***Uncontained large fires include only fires being managed under a full suppression strategy.

| | |
|---|------------------|
| Ten Year Average Fires (2011 – 2020 as of today) | 46,819 |
| Ten Year Average Acres (2011 – 2020 as of today) | 6,591,800 |

***Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

***Additional wildfire information is available through the Geographic Areas at <https://gacc.nifc.gov/>

Predictive Services Discussion: An upper low over the Four Corners will slowly drift eastward over the southern Rockies, while an upper-level trough swings east-northeast through the Northwest and Northern Rockies. A cutoff low is also forecast to develop off the California coast. Upper-level ridging will continue to extend from the Southeast into the Great Lakes with an upper-level trough remaining over the Northeast. Cold fronts are likely to stall in the northern Great Basin, northern High Plains, and on the central and southern Plains into the western Great Lakes. Dry conditions are expected in much of California and Nevada with locally breezy northerly winds in southern and central California possible, especially overnight. Lingering showers and thunderstorms are likely in much of Colorado and New Mexico, with more widespread coverage across the southern and central Plains into the Midwest and Mississippi Valley. The heaviest rain and greatest coverage of thunderstorms are likely in Texas. Isolated showers and thunderstorms are also likely in portions of the Idaho Panhandle, Montana, and into northeast Oregon.

Spot Weather Forecast

Weather – Fire Behavior Category

Spot weather forecasts should be requested or submitted online for those fires that have potential for extreme fire behavior, exceed initial attack, or are located in areas where Red Flag Warnings have been issued.

● Basic elements needed for a spot weather forecast include:

- Location by street address/zip code/city name, latitude/longitude, or US National Grid, or drag to a location using the spot weather forecast request webpage <https://www.weather.gov/spot/>.
- Type of incident (wildfire, prescribed burn, hazardous materials, search and rescue).
- Project/incident name.
- Requesting agency/official, email address, and phone number.
- Elevation (at top and bottom of incident).
- Drainage name, size, aspect, fuel type, and sheltering (full, partial, unsheltered).
- Forecast delivery time (i.e., as soon as possible or a later time), time forecast should start, and time zone.
- Any remarks that can help meteorologists forecast the site, pertinent feedback information (i.e., humidity values were lower than predicted), or special requests (i.e., very interested in potential wind shifts).

Activity

Calibrate your handheld fire weather meter and review belt weather kit use. Refer to the *NWCG Standards for Fire Weather Stations*, PMS 426-3, <https://www.nwcg.gov/publications/426-3>, for information.
