Predictive Services Discussion: An upper high will strengthen and shift north from the Mojave to the Sierra and western Nevada, while troughing over western Canada will result in stronger westerly flow aloft across the Northwest and Northern Rockies. An upper low will swing through southern Ontario, with troughing extending through the Great Lakes into the Mid-Atlantic and Northeast and an associated cold front pushing south across parts of the northern Plains and Great Lakes. Dry and windy conditions are expected across portions of central and eastern Idaho, Montana, and into central Wyoming. Dry and breezy conditions are also possible along and east of the Cascades. Very low relative humidity and above average temperatures will continue across much of California and the Intermountain West away from isolated to scattered thunderstorms in southern and eastern Arizona, New Mexico, and far southern Colorado. Light showers are likely in western Washington, and another slight chance of showers and thunderstorms is forecast in far northeast Minnesota.

Ash Pit Hazards

Miscellaneous Fireline Hazards

Ash pits are an inherent and hidden risk to wildland firefighters that can cause severe burns and injuries. Ash pits are created when a ground fire consumes underground fuels creating an empty space that is imperceptible from the surface.

Ash pits are an inherent and hidden risk to wildland firefighters that can cause severe burns and injuries. Ash pits are created when a ground fire consumes underground fuels creating an empty space that is imperceptible from the surface.

- Environmental factors that increase the risk of ash pit formation after a wildfire:
 - Extensive root systems of trees and shrubs.
 - Deep duff or peat, which is the organic layer covering mineral soil.
 - Landscapes that have once been cultivated or manipulated by heavy equipment, old dozer piles, sawmills, timber sale yards, or decking areas.
 - Animal dwellings that have become filled with decadent combustible debris.
 - Small rodent holes,
 - Beaver holes near dams and stream beds, or
 - Badger and coyote dens.
 - White ash is sometimes an indicator of ash pits, as are swarms of hovering insects.
 - With the sun behind the suspected ash pit, look for small nearly translucent smokes that dissipate quickly above the ground.
 - Ash pits often give off the smell of incomplete combustion or of creosote burning.
- Mitigation measures to consider:
 - Identification of high-risk landscape.
 - Identify and flag all hazardous discovered ash pits.
