Predictive Services Discussion: Upper-level ridging will strengthen over the West and extend northward into western Canada, with the upper high over Nevada. An upper-level trough will exit the Great Lakes and move over the Northeast, while another upper-level trough begins to deepen over south-central Canada as it approaches the Great Lakes. A cold front is likely to slide south across Montana and much of the northern Plains. West-northwest sustained winds of 15-25 mph gusting to 25-40 mph and minimum RH of 7-25% are expected due to the cold front and downslope flow across portions of Idaho, much of Montana and Wyoming, and into the western Dakotas. Well above average temperatures and low relative humidity will continue across much of the West, with isolated monsoon thunderstorms likely confined to southern Arizona and southern New Mexico. Isolated to possibly scattered thunderstorms are forecast across northern Minnesota into northern Wisconsin and the Upper Peninsula of Michigan, likely in the evening and overnight.

Frequent Spot Fires Across the Line

Weather – Fire Behavior Category

This watch-out situation clearly indicates how much potential a fire has for rapid, uncontrolled growth. Consider the following questions if you are getting spot fires across your line:

- Can you handle increased spotting?
List some ways you can keep ahead of spot fires (gridding the green, lookouts, etc.).
- What is your Probability of Ignition (PIG)? Is it increasing or decreasing?
- Do you have a plan for long-range spotting? In what fuel type and under what conditions is it likely? What planning would account for handling long-range spotting?
- Is help available if necessary? What kinds of resources will you have in place, or order, to handle spot fires?
- If fire behavior increases, is your position still defensible?
Discuss what type of action you might take if a spot fire takes off.
- Do you have more than one safety zone in case access to one is cut off?
Describe how you might utilize multiple safety zones.
- Do the primary lookouts have a good view of the situation?
Discuss who might be acting as a lookout (crew member, air resources, supervisors, etc.) and how you will get accurate information from that person. Are you relying on an air attack that is busy with airtankers?
- Where are you in the burning period? Talk about how your tactics for finding spot fires early in the day to later into the evening may vary. Review PIG and what it can tell you about spotting potential.
- To reduce the risk, are you ready to retreat?
Keep your guard up even if spotting has not occurred for a few hours. Review incidents where you have had frequent spot fires and share what you have learned about controlling them.
