**Predictive Services Discussion:** An upper-level trough will move into the West Coast with upper ridging moving into the northern Plains. An upper low will move east across the Southwest while upper troughing remains over the Northeast. A strong Pacific cold front will move through the interior Northwest, northern California, and Idaho Panhandle during the day and into the northern Great Basin into central Montana overnight. Elevated to critical conditions are expected ahead of the front in northeast California, the Sierra Front, and northern Great Basin into southwest Montana. Breezy and dry conditions are also forecast across the remainder of the Great Basin, eastern California, eastern Oregon, and Wyoming while elevated conditions continue across portions of the central and southern Plains. Showers will fall across western Oregon and Washington into northwest California and the interior Northwest during the day. Showers will then spread into the Idaho Panhandle and northwest Montana overnight with wetting rain likely. Scattered showers and thunderstorms are expected over the Southwest spreading into southeast Utah, Colorado Rockies, and west Texas.

## Escape Routes: Take 5@2

Operational Engagement Category

Consider the following scenario:

It's 1400, you have been working all morning. How far away are your safety zones? Safety zones are only good if you can reach them. How long will your escape route take? What is the condition of the crew? How long will it take your slowest member to get there? Are your expectations realistic?

Look at the times below. If your fire blows up right now, can you, and every member of your crew, make it to your safety zone?
