

**National Interagency Coordination Center  
Incident Management Situation Report  
Thursday, August 18, 2022 – 0730 MDT  
National Preparedness Level 3**

**National Fire Activity:**

Initial attack activity:	Light (131 fires)
New large incidents:	3
Large fires contained:	1
Uncontained large fires: **	26
Area Command teams committed:	0
NIMOs committed:	1
Type 1 IMTs committed:	3
Type 2 IMTs committed:	9
***Complex IMTs committed:	0

\*\*\*Complex Incident Management Teams (CIMTs) are configured to respond to large, complex fires and can expand and reduce staffing in all functional areas as necessary to meet the needs of the incident.

Nationally, there are 51 fires being managed under a strategy other than full suppression.

\*\*Uncontained large fires include only fires being managed under a full suppression strategy.

### **Northwest Area (PL 3)**

New fires:	28
New large incidents:	1
Uncontained large fires:	4
Type 1 IMTs committed:	2
Type 2 IMTs committed:	2

**White River**, Okanogan-Wenatchee NF, USFS. IMT 2 (NW Team 7). IMT is also managing the Irving Peak fire. Twenty-three miles northwest of Leavenworth, WA. Timber. Active fire behavior with short-range spotting, group and single tree torching. Numerous structures threatened. Evacuations and area closures in effect.

**Irving Peak**, Okanogan-Wenatchee NF, USFS. Twenty-six miles northwest of Leavenworth, WA. Timber. Active fire behavior with short-range spotting, group and single tree torching. Residences threatened. Area closures in effect.

**Windigo**, Umpqua NF, USFS. IMT 2 (NW Team 10). IMT is also managing the Potter and Big Swamp fires. Twenty miles southwest of La Pine, OR. Closed timber litter, timber and medium slash. Minimal fire behavior with creeping and smoldering. Area, road and trail closures in effect.

**Potter**, Willamette NF, USFS. Forty-six miles southwest of La Pine, OR. Closed timber litter, timber and medium slash. Moderate fire behavior with wind-driven runs, torching and spotting. Area, road and trail closures in effect.

**Big Swamp**, Willamette NF, USFS. Thirty-seven miles southwest of La Pine, OR. Closed timber litter, timber and medium slash. Moderate fire behavior with flanking, isolated torching and short-range spotting. Area, road and trail closures in effect.

**Cedar Creek**, Willamette NF, USFS. Transfer of command from IMT 1 (PNW Team 2) to IMT 1 (PNW Team 3) will occur tomorrow. Fifteen miles east of Oakridge, OR. Timber and closed timber litter. Active fire behavior with flanking, isolated torching and smoldering. Structures threatened. Area, road and trail closures in effect.

\* **Bear Creek**, North Cascades NP, NPS. Twenty miles northwest of Diablo, WA. Timber. Minimal fire behavior with creeping and smoldering. Last narrative report unless significant activity occurs.

**Predictive Services Discussion:** Isolated to scattered mixed wet and dry thunderstorms are likely across northern California, northern Nevada, southern and central Oregon, and into southwest Idaho and the Washington Cascades. Isolated thunderstorms will likely be ongoing in the morning across northwest Nevada and northeast California, and morning cloud cover could alter the forecast location and coverage of thunderstorms. Hot, dry, and unstable conditions will continue across much of California, the Northwest, northern Great Basin, and northern Rockies as temperatures remain in the upper 90s to low 100s and minimum relative humidity below 20% away from thunderstorms. Scattered to widespread monsoon thunderstorms are expected from the Southwest into the central Great Basin and greater Four Corners region. Scattered to widespread thunderstorms are also expected across much of Texas and the Southeast, with the strongest and greatest coverage of storms likely along the central Gulf Coast into southeast Georgia. Showers and thunderstorms are also likely across the northern Plains into the western Great Lakes and Nebraska.

## Hazard Trees – Situational Awareness

*Felling Safety Category*

Snags are dead, standing trees without leaves or needles in the crowns and present a significant threat to forest worker safety. Snags may burn through more quickly than green trees and can fall without warning. Live, structurally compromised green trees weakened by insects, disease, weather, fire, and age can also fall without notice.

Sawyers and crews operate with increased risk from hazard trees during low visibility or night operations. Night saw operations should include discussions involving minimizing falling operations due to reduced visibility and the reduction of situational awareness of immediate surroundings.

### **Environmental conditions that increase risk from hazard trees:**

- Strong or gusty winds from storm cells.
- Air operations - water or retardant drops, rotor wash from helicopters.
- Steep slopes with rolling material.
- Diseased or bug-killed areas (Mountain Pine Beetle).
- Fire weakened timber.
- Reduced visibility from smoke, fog, or darkness.

### **Things to consider when assessing the potential danger of hazard trees in an area:**

- Timbered areas that have been burning for an extended period.
- High-risk tree species (those that are known for rot and shallow root systems) in the area.
- Numerous downed trees or tree parts in the area.
- Broken tops and dead limbs overhead or an accumulation of downed limbs around tree boles (stems).
- Signs of tree decay including: cavities, splits, cracks, lack of needles, mechanical damage, missing bark, insect infestation, mushrooms, or fungus growing from tree.
- Root damage from equipment, fire, or erosion.
- Steep slopes for rolling debris, reduced personnel mobility, and more difficult size-up.
- Weather forecast with high winds or wind impacting the tree canopy.

### **Identify mitigation measures to reduce risk from hazard trees:**

- Identify, communicate, establish, and monitor No-Work-Zones (NWZ) in all high-risk areas until the hazard has been mitigated.
- Assign qualified sawyers and falling bosses based on the complexity of the hazard.
- Consider ordering in higher complexity fallers in advance.
- Use heavy equipment or explosives to avoid placing sawyers under hazards.
- Plan quick and safe escape routes.
- Minimize exposure time at the stump by employing efficient felling procedures.
- Minimize impacts to the hazard tree from wedge pounding or other felling operations in the area.
- Do not turn your back on a falling tree or known hazard.
- Use lookouts to maintain secure felling areas.
- Discuss/practice medical evacuation procedures and accept risk accordingly.
