Predictive Services Discussion: Upper troughing is likely along the West Coast while upper ridging and above normal temperatures continue across the Plains. Elevated conditions are likely across much of the Plains from Oklahoma to South Dakota due to south winds 15-25 mph with gusts 25-35 mph amid relative humidity of 12-25%. Oklahoma will be of greatest concern as little rainfall has fallen the past two weeks, but conditions across portions of the central Plains will be mitigated by rain last weekend. Locally elevated conditions are likely along the eastern slopes of the northern Sierra into the southern Cascades due to continued enhanced westerly flow as well. Scattered wet thunderstorms will continue across the central and eastern Great Basin into the Rockies, with the heaviest rain and potential flash flooding from eastern Nevada through Utah to the West Slope. A few wet thunderstorms are possible from northeast Washington across the Idaho Panhandle and into northwest Montana as well. Showers and thunderstorms are likely to develop across northern Plains into Minnesota along and ahead of a cold front while scattered wet thunderstorms continue across the Florida Peninsula.

Aviation Communications

Aviation Category

Discuss the following information in terms of effective communication with aircraft. Involve the pilot in this discussion.

- Establish an air-to-ground frequency on the fire, and make sure everyone knows what it is.
- Avoid switching frequencies in the middle of an operational period.
- Discuss Guard frequencies:
 - How they work.
 - When to use them.
 - What frequencies are established for aircraft in your area?
- Aviation communication should be clear, concise, and to the point.
- Use standard terminology that can be understood by everyone you are talking to. Do not use local slang.
- Know what you want to say before you key the microphone. Don't think and talk at the same time.
- Before you key your microphone to talk, ensure you are not cutting into another transmission.
- Identify who you want to talk to by the call sign and identify yourself in every transmission.
- If the frequency gets congested, request another frequency. Upon receipt, ensure that all people who need to be on the new frequency transfer to that frequency.
- When giving ground descriptions, describe the location as if you are viewing it from the direction an aircraft would be traveling. Use a common frame of reference for the sender and receiver.
- Use easily understandable directions, such as north, south, east, west, 2 o'clock, 9 o'clock, left 20 degrees, right 45 degrees, etc.
- When giving directions, always give them in relation to the pilot's perspective.
