National Fire Activity (April 14, 2023 - April 20, 2023):

| Fire Activity and Teams Assigned | Total |
| :--- | :---: |
| Initial attack activity: | Light (1,075 fires) |
| New large incidents: | 50 |
| Large fires contained: | 50 |
| Uncontained large fires: ** | 19 |
| Area Command teams committed: | 0 |
| NIMOs committed: | 0 |
| Type 1 IMTs committed: | 0 |
| Type 2 IMTs committed: | 0 |
| Complex IMTs committed: | 0 |

Nationally, there are zero fires being managed under a strategy other than full suppression.
**Uncontained large fires only include fires being managed under a full suppression strategy.

## Geographic Area daily reports

## Understanding the IMSR

On April 13, a firefighter with the West Virginia DNR was fatally injured while assigned to the Tucker Hollow fire in West Virginia. The firefighting community extends its condolences to the family and friends of the deceased.

This report will be posted every Friday at 0730 Mountain Time unless significant activity occurs.
Active Incident Resource Summary

| GACC | Incidents | Cumulative Acres | Crews | Engines | Helicopters | Total Personnel | Change in Personnel |

Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

## Predictive Services Discussion:

Elevated to critical fire weather conditions due to dry and windy weather are likely in much of New Mexico and on portions of the central Plains today into Saturday. As an upper-level trough approaches and moves through the West, dry and windy conditions are expected across western and southern portions of the Great Basin, much of the Southwest, and onto the southern High Plains early to mid-next week. Pre-frontal dry and potentially breezy conditions are likely across portions of the southern and central Appalachians into the Mid-Atlantic today, but scattered to widespread rainfall is likely across much of the Appalachians and East Coast today into Sunday. Post-frontal dry and breezy conditions are expected in portions of the Southeast into the Mid-Atlantic this weekend and early next week.

Scattered precipitation is expected across the West this weekend through early next week, with higher totals in the Cascades and Rocky Mountains. Precipitation coverage and totals are likely to be less in California, the western and southern Great Basin, and the Southwest. A warming and drying trend is expected across the West Coast by late next week. As the trough moves through the West and towards the southern Plains and Southeast, widespread and potentially heavy rainfall is likely from Kansas through central and east Texas extending through the Lower Mississippi Valley into the Southeast late this weekend through mid-next week.
