## Predictive Services Discussion:

Hot, dry, and unstable conditions will continue across the Northwest extending into northern California, the northern Rockies, and northern Great Basin. Temperatures up to $110^{\circ} \mathrm{F}$ will occur in the lower valleys, with widespread temperatures in the 90 s in the higher elevations. Relative humidity will fall to $10-25 \%$ with poor overnight recovery below $30 \%$ for many mid-slopes and ridges. In addition, gusty westerly winds will develop in the Cascade Gaps, while isolated to scattered mixed wet and dry thunderstorms develop over northern California into southwest and central Oregon. Monsoon moisture will remain across the southern Sierra and Southwest into the greater Four Corners, with scattered wet thunderstorms in the afternoon and evening. Cooler temperatures are forecast across much of Texas into the Lower Mississippi Valley, but dry and gusty post-frontal northerly winds will create locally elevated conditions in north and central Texas into Louisiana. Scattered thunderstorms will develop near the stalled front in south Texas and along the Gulf Coast with potential new ignitions, while scattered to widespread thunderstorms will develop along the East Coast. Cooler and wetter conditions are forecast for Interior Alaska.
