## Predictive Services Discussion:

Isolated mixed wet and dry thunderstorms will develop over northwest California into south-central and southwest Oregon. Isolated to scattered mainly dry thunderstorms are likely to develop overnight across from the Cascades westward to the coast over Oregon and southern Washington. Hot, dry, and locally breezy conditions will continue across the southern Plains into the Lower Mississippi Valley, with record high temperatures likely in the Lower Mississippi Valley and Deep South. Isolated thunderstorms are possible along the northern Gulf Coast with new ignitions possible as well. Breezy and dry westerly winds with gusts up to 40 mph are likely across much of north-central and northeast Montana. Scattered to widespread monsoon thunderstorms will continue in the Four Corners states, with scattered to numerous thunderstorms in the Great Lakes, Northeast, and MidAtlantic. Across Alaska, strong downslope southerly winds will develop north of the Alaska Range, but temperatures will remain seasonable with elevated relative humidity.
