## Predictive Services Discussion:

Above normal temperatures with minimum relative humidity of $15-35 \%$ will continue near and west of the Cascades in northwest California, Oregon, and Washington, with locally breezy west winds in the Coast Range. Above normal temperatures will continue into the northern Great Basin, Inland Northwest, and northern Rockies as well. Isolated to scattered mixed wet/dry thunderstorms will develop across northeast Oregon into southern Idaho, southern Montana, and Wyoming. Scattered monsoonal thunderstorms will continue over New Mexico and Colorado, with isolated thunderstorms over the higher terrain of eastern Arizona into southeast Utah. Much of western Arizona, the southern Great Basin, and southern California will be hot and dry with temperatures exceeding $105^{\circ}$ F. Scattered thunderstorms will develop from central Texas into the Deep South with small rainfall footprints and strong outflow winds due to continued hot temperatures. Widespread thunderstorms are likely across northeast Georgia into the Carolinas providing more significant relief. Near to below normal temperatures are expected across the northern Plains, Great Lakes, and Northeast.
