

**Incident Management Situation Report  
Friday, February 17, 2023 – 0730 MDT  
National Preparedness Level 1**

**National Fire Activity (February 10, 2023 – February 16, 2023):**

<b>Fire Activity and Teams Assigned</b>	<b>Total</b>
Initial attack activity:	Light (379)
New large incidents:	3
Large fires contained:	7
Uncontained large fires: **	0
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0
<a href="#">Complex IMTs</a> committed:	0

Nationally, there are zero fires being managed under a strategy other than full suppression.

\*\*Uncontained large fires only include fires being managed under a full suppression strategy.

**Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.**

## **Predictive Services Discussion:**

Quiet weather is expected over much of the contiguous US through the weekend. A cold front will exit the East Coast today with light precipitation, while weak upper-level short-waves move through the Northwest and northern Rockies with periods of light snow in the mountains. Dry and breezy conditions are expected over the southern High Plains as well, with locally elevated fire weather conditions possible.

A more active pattern will develop next week as deep upper level troughing develops near the West Coast, with upper ridging over the southeastern US. Westerly winds are expected to increase across the southern High Plains early next week, with elevated to critical conditions likely Monday through Wednesday. Significant fire potential will increase each day, peaking on Wednesday. Meanwhile, widespread precipitation will move southward in the West during the week, with snow levels near sea level in the north and 3,000 to 5,000 feet in southern California and the southern Great Basin. Heavy mountain snow will fall in the Cascades, Sierra, and Rockies next week, and areas of heavy valley snowfall are likely as well.

As a portion of the trough moves into the Plains mid to late next week, heavy snow is likely to develop over portions of the Plains into the western Great Lakes. Widespread wetting precipitation is expected from eastern Oklahoma and Texas through the Mid-Mississippi Valley to the Great Lakes, then eastward into the central Appalachians and Northeast. While portions of the Southeast and much of Florida will remain dry next week, fire potential is forecast to remain low as relative humidity is likely to remain above critical values.
