Nationally, there are seven fires being managed under a strategy other than full suppression. **Uncontained large fires only include fires being managed under a full suppression strategy.

## Geographic Area Reports

## Understanding the IMSR

Five incident management teams, eight fire suppression crews, 60 smokejumpers and 60 overhead personnel are assigned to large fire support in Canada.

Active Incident Resource Summary

| GACC | Incidents | Cumulative Acres | Crews | Engines | Helicopters | Total Personnel | Change in Personnel |

Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

## Predictive Services Discussion:

Dry and breezy conditions will continue across parts of southeast California, the southern Great Basin, southwest Colorado, and northern portions of the Southwest leading to elevated and locally critical fire weather conditions. Hot, dry, and unstable conditions will continue across parts of the Desert Southwest and Pacific Northwest. Isolated dry thunderstorms remain possible along and east of the Cascades into the northwest Great Basin and parts of the northern Rockies. Additionally, isolated to scattered mixed wet and dry thunderstorms are expected in southeast Arizona into central New Mexico. Scattered thunderstorms are likely in much of the Rockies, along and east of the Divide, while severe thunderstorms are likely on much of the central and southern High Plains into the southern Plains, Lower/Mid-Mississippi Valley, and Ohio Valley. Scattered to widespread thunderstorms are expected along the Gulf Coast through much of the Southeast and up the East Coast. Scattered showers with cooler temperatures and higher relative humidity will spread across much of Alaska, but parts of southeast Alaska, including the panhandle, will remain warmer and drier.

National Predictive Services Outlooks
