Nationally, there are eight fires being managed under a strategy other than full suppression.
**Uncontained large fires only include fires being managed under a full suppression strategy.

## Geographic Area Reports

## Understanding the IMSR

Five incident management teams, 12 fire suppression crews, 30 smokejumpers, 12 rappellers and 58 overhead personnel and are assigned to large fire support in Canada.

Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

## Predictive Services Discussion:

Hot temperatures to continue across southern California, the Southwest, and Texas, and expand into the Southeast. Isolated to scattered mixed wet and dry thunderstorms will develop in the afternoon for the central and southern Great Basin, West Slope, and Southwest near and ahead of a stalled cold front. Significant fire potential will be highest over the greater Four Corners area. Breezy westerly winds are also likely to continue across portions of the southern Great Basin, while dry, downslope winds are likely in north-central Montana and much of Wyoming. Dry, but cooler conditions are forecast for northern California, Northwest, northern Great Basin, and northern Rockies. Breezy south winds in Texas will continue to create areas of elevated fire weather conditions, with fuels gradually drying in the Southeast due to the heat. Scattered to numerous showers and thunderstorms will develop along and ahead of a cold front from the northern Plains into the Ohio Valley where storms are most likely to be severe. Scattered showers and thunderstorms are also forecast for much of the Northeast and Florida Peninsula.

National Predictive Services Outlooks

## 6 Minutes for Safety:

The 6 Minutes for Safety topic of the day is Serious Injury Procedures
