Nationally, there are 10 fires being managed under a strategy other than full suppression.
**Uncontained large fires only include fires being managed under a full suppression strategy.

## Geographic Area Reports

## Understanding the IMSR

Seven incident management teams, 16 fire suppression crews, 30 smokejumpers, 21 rappellers, 10 engines and 56 overhead personnel and are assigned to large fire support in Canada.

Active Incident Resource Summary

Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

## Predictive Services Discussion:

Isolated to widespread mixed wet and dry thunderstorms are expected across much of Arizona, New Mexico, into Colorado, mostly along and east of the Divide, and possibly southern Utah and Nevada. Some of the thunderstorms will likely have strong to severe outflow winds, with haboobs possible if thunderstorms drift off the higher terrain into the lower elevation deserts. Away from thunderstorms, hot, dry, unstable, and breezy conditions will develop across much of Texas through the Southwest, southern California, and southern Great Basin. Well above normal temperatures will extend northward through much of the West, especially the Central Valley and Intermountain West, with gusty winds in the Cascade Gaps. Above normal temperatures will extend out of Texas into the Southeast as well. However, a cold front will continue to push southeast with thunderstorms expected from eastern Oklahoma to the Georgia coast, which will limit the extent of hot, dry, and breezy conditions. Thunderstorms and showers are likely to continue for the Mid-Atlantic through the Northeast and portions of the southern and central Plains. Warm and dry conditions will continue for the Alaska Interior.

National Predictive Services Outlooks

## 6 Minutes for Safety:

The 6 Minutes for Safety topic of the day is Hazard Tree Identification.
