Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

## Predictive Services Discussion:

West-southwest sustained winds of $15-25 \mathrm{mph}$ gusting $25-45 \mathrm{mph}$ with minimum relative humidity of $5-20 \%$ will develop again from the Sierra Front across the northern Great Basin, extending through portions of eastern and central Idaho and southwest and north-central Montana along a stalled surface front and amid downslope flow. Elevated to locally fire weather critical conditions will develop again as a result. Isolated to scattered mixed wet and dry thunderstorms will continue across the Southwest, greater Four Corners, and possibly into southeast California, southern and eastern Nevada, and western Wyoming. Hot, dry, and unstable conditions will continue across much of the Desert Southwest, Texas, Plains, Mississippi Valley, and Southeast.
Thunderstorms will continue across the Gulf and Atlantic Coasts and from the northern Plains into the Midwest. The Alaska Interior will remain hot with scattered thunderstorms.

## National Predictive Services Outlooks

## 6 Minutes for Safety:

The 6 Minutes for Safety topic of the day is Dutch Creek Incident.
