Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

## Predictive Services Discussion:

West-southwest sustained winds of 10-25 mph gusting $25-35 \mathrm{mph}$ with minimum relative humidity of $5-20 \%$ will develop across much of the Great Basin, with locally breezy conditions into portions of southeast Oregon and northeast California. Breezy south winds are also forecast across much of Texas and Oklahoma amid minimum relative humidity of $10-35 \%$. Hot temperatures will continue across southeast California through the greater Four Corners into much of the southern and central Plains and Southeast. Isolated to scattered mixed wet and dry thunderstorms will develop across the Southwest northward through the Rockies, mainly near and east of the Divide. Increased moisture in southeast Arizona and southwest New Mexico will lead to mainly wet thunderstorms. Gusty outflow winds are likely with these thunderstorms, and the greatest potential for strong outflows will be across southwest Montana. Thunderstorms, some severe, will develop from the northern Plains through the Great Lakes ahead of a cold front, with isolated thunderstorms likely along the Gulf and Atlantic Coasts. Above normal temperatures will continue across much of Alaska with isolated thunderstorms forecast for the eastern Interior.

National Predictive Services Outlooks

## 6 Minutes for Safety:

The 6 Minutes for Safety topic of the day is Stanza Fire Engine Rollover.

[^0]:    * Blum, Texas A\&M Forest Service. Started on private land four miles south of Blum, TX. Chaparral and southern rough. Active fire behavior with single tree torching, group torching and creeping. Residences threatened.
