## Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

## Predictive Services Discussion:

Breezy west to southwest winds will develop across much of the Inland Northwest into the northern Rockies and northern and western Great Basin. Elevated to locally critical conditions are expected as minimum relative humidity falls to $5-20 \%$. Moisture will increase for much of Arizona into western New Mexico with scattered to widespread mainly wet thunderstorms, while isolated to scattered mixed wet and dry thunderstorms are forecast for southeast California, the eastern and southern Great Basin, and Rockies. Significant fire potential will remain moderate for much of the areas, but high-risk significant fire potential is forecast for portions of north-central Montana. Above normal temperatures will continue across much of the Intermountain West through the Plains and into the Southeast. Thunderstorms will develop from the northern and central Plains through the Mid-Mississippi Valley into the Southeast, with a few severe thunderstorms as well. Above normal temperatures will continue across the central and eastern Interior, spreading into south-central Alaska today, but thunderstorms will be limited, occurring near the Canadian border.

National Predictive Services Outlooks

## 6 Minutes for Safety:

The 6 Minutes for Safety topic of the day is SAFENETs.

[^0]:    * Ponds, Military Zone, BLM. Started on DOD land 11 miles southwest of Delta Junction, AK. Grass. Moderate fire behavior with backing, torching and single tree torching. Last narrative report unless significant activity occurs.
