Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

## Predictive Services Discussion:

A cold front will move through the Great Lakes and Northeast today with scattered, mainly wet, thunderstorms and the heaviest rainfall is likely in New England. Isolated showers and thunderstorms are expected farther south from the Ohio Valley to the northern Gulf Coast and Florida. Dry and breezy conditions will develop across Arizona today with moderate significant fire potential in the lower elevations. Scattered showers and thunderstorms are forecast across the mountains of central and northern California through the Great Basin into much of the Rockies and southern Plains. Above normal temperatures with afternoon relative humidity will continue for the Inland Northwest and Idaho Panhandle. Warmer and drier conditions are expected today across south-central Alaska and the Interior while shower and cooler temperatures are likely in southwest Alaska.

National Predictive Services Outlooks
