Predictive Services Discussion:

Widespread dry and windy weather will spread across the Southwest, southern Great Basin, West Slope, and southeast California leading to elevated and critical fire weather conditions, including moderate to high-risk significant fire potential in the Southwest. Warm and dry conditions will persist in much of the Great Lakes, with minimum relative humidity below 35% in northern and western Michigan, northeast Minnesota, and northern Wisconsin, but thunderstorms are likely in much of Minnesota. Hot and dry conditions will continue across much of Texas into Louisiana with relative humidity below 20% in south and southwest Texas. Severe thunderstorms are likely on the eastern slopes of the central and southern Rockies onto the High Plains. Isolated thunderstorms are likely over the mountains in northern California and possibly in northern Washington. Scattered to widespread showers and thunderstorms are expected in much of the Southeast, southern Appalachians, and Mid-Atlantic, with thunderstorms extending into southeast Texas. Scattered showers are likely across the southern half to two-thirds of Alaska.
