

**Incident Management Situation Report
Friday, March 10, 2023 – 0730 MDT
National Preparedness Level 1**

National Fire Activity (March 3, 2023 – March 9, 2023):

Fire Activity and Teams Assigned	Total
Initial attack activity:	Light (703)
New large incidents:	17
Large fires contained:	20
Uncontained large fires: **	2
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0
Complex IMTs committed:	0

Nationally, there are two fires being managed under a strategy other than full suppression.

**Uncontained large fires only include fires being managed under a full suppression strategy.

[Geographic Area daily reports](#)

[Understanding the IMSR](#)

This report will be posted every Friday at 0730 Mountain Time unless significant activity occurs.

Southern Area (PL 1)

Fire Activity and Teams Assigned	Total
New fires:	652
New large incidents:	14
Uncontained large fires:	2

* **Gooskie**, Florida Forest Service. Ten miles northeast of Ocala, FL. Grass and southern rough. Minimal fire behavior with smoldering, creeping and flanking.

* **Sophie**, North Carolina Forest Service. Eleven miles southeast of Fayetteville, NC. Southern rough. Moderate fire behavior with isolated torching. Residences threatened.

* **BK Cranal Road**, National Forests in Alabama, USFS. Four miles northwest of Grayson, AL. Hardwood litter. Active fire behavior with running and flanking. Last narrative report unless significant activity occurs.

* **Bombing Range 3**, National Forests in Florida, USFS. Nine miles west of Astor Springs, FL. Brush, southern rough and timber. Moderate fire behavior. Last narrative report unless significant activity occurs.

Acres (2013 – 2022 as of today)	282,413

Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

A strong atmospheric river will continue to move into California and the Great Basin today, with heavy snow in the Sierra and higher elevations of the Great Basin, while heavy rain falls in the middle to lower elevations. Areas of flooding will continue in California and portions of western Nevada. Lighter precipitation will fall across the Northwest and northern and central Rockies today. This weekend, light to moderate precipitation will continue before another atmospheric river makes landfall on the West Coast early to mid-next week and brings precipitation to much of the West, heaviest in California.

Elevated to locally critical conditions are likely across much of the central and southern High Plains today and Saturday, then return mid-next week after a brief break of higher relative humidity and light winds Sunday into Monday. Periods of light to moderate precipitation are possible today and Monday across the Southeast and Florida Peninsula. However, not all areas will receive wetting rain, and with dry northwest winds forecast behind each round of precipitation, areas that receive little rainfall will continue to have moderate risk of significant fires for the next week, especially across Florida, Georgia, and the Carolinas. Meanwhile, rain with snow on the northern fringes, is forecast this weekend from the northern Plains into the Great Lakes, then move into the Northeast early next week.
